

TRA-8206 HD SD

Triple Serial HD / SD SDI Reclocking Distribution Amplifier

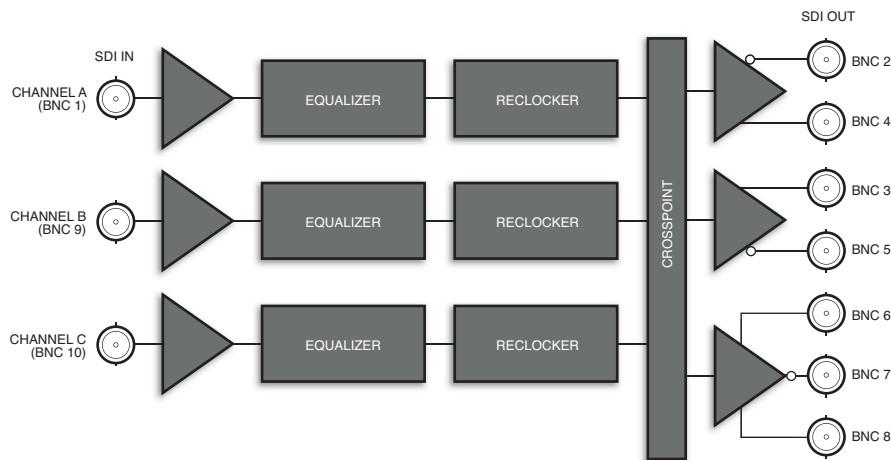

3 independent channels of HD / SD SDI distribution for standard and high-definition SDI signals.

The TRA-8206 is a 3 channel HD / SD SDI distribution amplifier capable of equalizing and reclocking all common serial digital signals. Support for both standard and high-definition signals makes the TRA-8206 a universal SDI distribution amplifier.

Each channel of the TRA-8206 equalizes the incoming SDI signal, compensating for up to 300m of cable at 270Mb/s and up to 100m of cable at 1.485Gb/s. The signal is then reclocked with automatic rate detection for all popular data rates. Each channel is fully independent, and can run at different data rates.

LED indicators at the front of the module identify the presence of incoming video and the identified signal data rate for each channel.
