# SideShot-NG

SideShot-NG is the next-generation shotbox module inside a standalone SideBox control panel that connects to Acuity Production Switchers.

The SideShot module offers 32 multi-colored, user-configured LCD buttons that can be mapped with features found in OverDrive and the production switcher.

With SideShot-NG, the operator can easily manage Rundowns, CustomControls, QuickRecalls, and external production devices while bringing late-breaking stories and 'on-the-fly' events to air quickly and error-free.

## Features

- Familiar operations with 4 more LCD buttons
- Implements the same Processing Computer found in TouchDrive Panels
- 32 buttons with full LCD background display for vibrant colours
- New features and functionality to be deployed with Acuity and Ultrix Acuity software releases

## Specifications

- Multiple mounting options
- On desk with sturdy rubber feet
- In desk with 3 selectable angles and secure clamps
- MultiCore Processor running on Linux
- Based on the TouchDrive Panel CPU
- Redundant PSUs and optional second PSU
- 4 USB ports and 1 display port
- GigE Networking
