

Ultrix

The Ultimate Connectivity Platform

As a software-enabled modular routing and processing platform, Ultrix has revolutionized the live production industry. It's a groundbreaking solution that can be deployed as a standalone system or as part of a multi-frame distributed system. Let us help you pick the path that is right for you!

SINGLE-FRAME SOLUTIONS

EFFICIENCY

Condense racks of equipment and thousands of cables into a single chassis.

SIMPLICITY

Routers, Multiviewers, Audio / Video Processing, Audio Mixing, and Clean / Quiet Switching are all integrated.

FLEXIBILITY

Add features and capabilities simply through software licenses.

ADAPTABILITY

Coax, fiber, and IP transport are all available to maintain the flexibility you need as your business grows or changes.

DISTRIBUTED ARCHITECTURES

SCALABILITY

Grow at your own pace without worrying about running out of valuable Crosspoint I/O or frame space.

MULTI-SITE INTEGRATION

Create routing, processing, and multiviewer systems into a single control and monitoring fabric across separate buildings, cities, or even countries.

DISTRIBUTE RISK

Use small I/O building blocks to create a system made up of smaller chassis in order to minimize risk and downtime due to maintenance.

TRANSITION AT YOUR PACE

Add or move to emerging technologies like UHD or IP at your own pace. No need to replace entire systems – just add what you need.

Whatever your choice, Ultrix will enhance your productions today and into the future.
