

# Ultrix A · C · U · I · T · Y

Ultrix Acuity from Ross offers a complete production solution by combining the power of our flagship production switcher with the game-changing feature set of our flexible hybrid routing platform.

## SIZE MATTERS

The massive routing and audio processing capabilities of Ultrix along with the dazzling effects repertoire of Acuity are integrated seamlessly into a single 5RU chassis, making it ideal for applications where space is at a premium.

## MIX & MATCH FEARLESSLY

The flexible architecture of the hyper converged system means that format and connectivity challenges simply disappear.

## FUTURE CONFIDENT

Ross developed the concept of the Software-Defined Production Engine – SDPE. The idea is to avoid costly “forklift” upgrades by providing base hardware that can grow with simple, cost-effective software licenses.

## ROI↑ TCO↓

By fusing Ultrix and Acuity into one compact and uniquely powerful package, the total cost of ownership is reduced because expensive power, cooling, maintenance, and support costs are significantly lower.

## COMFORTABLY FAMILIAR

As game-changing as Ultrix Acuity is, operators might not even notice because they'll continue to work as they always have, using the same control surfaces they've become accustomed to.

## PEACE OF MIND INCLUDED

Ultrix Acuity's robust hardware is designed and engineered for 24/7 mission-critical applications. But if assistance is needed, Ross Video's global Technical support is second to none.
