

MONOGRAM CREATIVE CONSOLE

The Creative Console from Monogram is a modular, configurable USB control surface that is the perfect complement to our DashBoard control systems*. It offers a selection of buttons, knobs and slider modules along with the unique, pressure-sensitive Orbiter to offer precise, responsive and tactile control options for every parameter. Each module connects instantly to its neighbor via spring-loaded pins, while powerful magnets ensure they stay together without the need for tools or fasteners. Creative Console is available in three pre-configured packages, or as individual modules, to provide the ideal controller for your application.

ADAPTABLE

Combine modules in virtually any shape or size and optimize them for your personal workflow and style. Left-handed? Right-handed? No problem, just detach, rearrange and reconnect as desired.

PRECISE

The Orbiter's large pressure-sensitive disk provides smooth, precise adjustments in two dimensions – perfect for pan/tilt or zoom control.

MAPPABLE

Use the default DashBoard mapping that comes with each of the stock configurations, or map your desired key functions to any of the physical controls on your console in any order or arrangement.

** Supported in Microsoft Windows only.*

CORE MODULE

Powers and connects the Creative Console to your PC or Mac. The Core Module provides fast and smooth performance with two mechanical keys for switching and previewing the console's functionality.

ORBITER

Provides expressive 2D control with a pressure-sensitive disc and an infinite encoder ring for smooth and precise adjustments. The disc is perfect for Pan, Tilt or Zoom, while the ring is great for focus, iris or any other continuously variable parameter.

ESSENTIAL KEYS

Three tactile mechanical switches to trigger actions, activate functions, or select cameras.

DIAL

Three endless encoders with a built-in button for secondary functions. Ideal for camera settings (gain, iris or black) or robotic parameters like duration or focus.
