

## NK Series Control Panel (RCP-NK1 and RCP-NKM)

### Button Label Template

This document has been formatted to create button labels for the RCP-NK1 and RCP-NKM Control Panels.

The second page presents a graphic image to show the labels as they would appear on the control panel buttons. The third page has six sets of 40 key labels to print, cut out and apply to the control panel.

We recommend printing onto overhead transparency sheets rather than paper, so that button illumination is not inhibited.

#### Steps to creating labels:

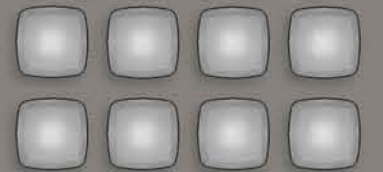

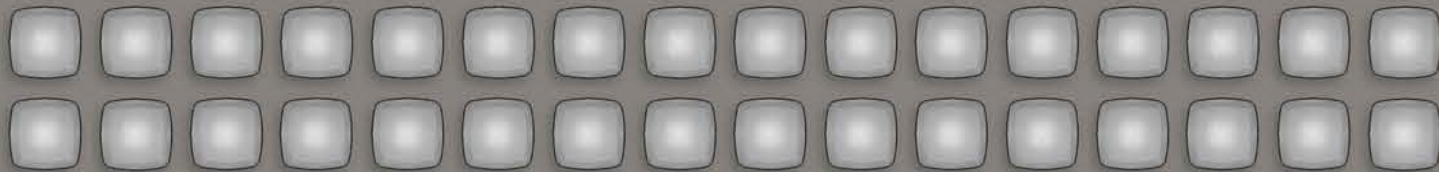

1. Open the RCP-NK1 or RCP-NKM software.
2. Click on the 'Labels' icon in the top right corner of the software.
3. Click on the 'Labels' icon in the top right corner of the software.
4. When you have assigned labels to all buttons, click on 'Update Label Set #' to assign all 40 labels to a Label Set on page 3. (The 6 Label Sets provided allow printing of multiple label sets to a single page.)
5. When you have finished assigning labels and have updated all six Label Sets (or as many as required), print out the third page *only* and cut along the dotted lines.
6. Remove individual button casings from the control panel and insert the new labels onto the desired buttons.

#### PDF Label Template Limitations:

- o Labels are limited to 8 characters.
- o Some larger characters may limit the labels effective text input to 5 characters.
- o Labels have also been designed to one line only.
- o If the text entered does not fit, a small '+' will appear in the right hand corner of the button.

**NOTE:** When printing, you must ensure that the page with the label templates (page 3) is printed at 100%, any print settings such as 'Fit to page', "Zoom" or "Magnification" must be disabled to ensure that labels fit into the button casings.

Remember when printing to **only** print page 3.
