

DMX-6259-A Series

**AES/EBU Audio De-Multiplexer with Fiber Optic Input
User Manual**

Thank You for Choosing Ross

You've made a great choice. We expect you will be very happy with your purchase of Ross Technology.

Our mission is to:

1. Provide a Superior Customer Experience
 - offer the best product quality and support
2. Make Cool Practical Technology
 - develop great products that customers love

Ross has become well known for the Ross Video Code of Ethics. It guides our interactions and empowers our employees. I hope you enjoy reading it below.

If anything at all with your Ross experience does not live up to your expectations be sure to reach out to us at solutions@rossvideo.com.

David Ross
CEO, Ross Video
dross@rossvideo.com

Ross Video Code of Ethics

Any company is the sum total of the people that make things happen. At Ross, our employees are a special group. Our employees truly care about doing a great job and delivering a high quality customer experience every day. This code of ethics hangs on the wall of all Ross Video locations to guide our behavior:

1. We will always act in our customers' best interest.
2. We will do our best to understand our customers' requirements.
3. We will not ship crap.
4. We will be great to work with.
5. We will do something extra for our customers, as an apology, when something big goes wrong and it's our fault.
6. We will keep our promises.
7. We will treat the competition with respect.
8. We will cooperate with and help other friendly companies.
9. We will go above and beyond in times of crisis. *If there's no one to authorize the required action in times of company or customer crisis - do what you know in your heart is right. (You may rent helicopters if necessary.)*

DMX-6259-A Series · User Manual

Notice

The material in this manual is furnished for informational use only. It is subject to change without notice and should not be construed as commitment by Ross Video Limited. Ross Video Limited assumes no responsibility or liability for errors or inaccuracies that may appear in this manual.

Safety Notices

Refer to the “**Important Regulatory and Safety Notices**” document that accompanied your product.

Statement of Compliance

This product has been determined to be compliant with the applicable standards, regulations, and directives for the countries where the product is marketed.

Compliance documentation, such as certification or Declaration of Compliance for the product is available upon request by contacting techsupport@rossvideo.com. Please include the product; model number identifiers and serial number and country that compliance information is needed in request.

EMC Notices

US FCC Part 15

This equipment has been tested and found to comply with the limits for a class A Digital device, pursuant to part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a Commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio

communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Notice — *Changes or modifications to this equipment not expressly approved by Ross Video Ltd. could void the user's authority to operate this equipment.*

Canada

This Class “A” digital apparatus complies with Canadian ICES-003 and part 15 of the FCC Rules.

Cet appareil numérique de la classe “A” est conforme à la norme NMB-003 du Canada.

European Union

This equipment is in compliance with the essential requirements and other relevant provisions established under regulation (EC) No 765/2008 and Decision No 768/2008/EC referred to as the “New Legislative Framework”.

Warning — *This equipment is compliant with Class A of CISPR 32. In a residential environment this equipment may cause radio interference.*

Australia/New Zealand

This equipment is in compliance with the provisions established under the Radiocommunications Act 1992 and Radiocommunications Labeling (Electromagnetic Compatibility) Notice 2008.

Korea

This equipment is in compliance with the provisions established under the Radio Waves Act.

Class A equipment (Broadcasting and communications service for business use)

This device is a business-use (Class A) EMC-compliant device. The seller and user are advised to be aware of this fact. This device is intended for use in areas outside home.

Type of Equipment	User's Guide
A급 기기 (업무용 방송통신기자재)	이 기기는 업무용(A급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.
Class A Equipment (Industrial Broadcasting & Communication Equipment)	This equipment is Industrial (Class A) electromagnetic wave suitability equipment and seller or user should take notice of it, and this equipment is to be used in the places except for home.

International

This equipment has been tested under the requirements of CISPR 22:2008 or CISPR 32:2015 and found to comply with the limits for a Class A Digital device.

Notice — *This is a Class A product. In domestic environments, this product may cause radio interference, in which case the user may have to take adequate measures.*

Maintenance/User Serviceable Parts

Routine maintenance to this openGear product is not required. This product contains no user serviceable parts. If the module does not appear to be working properly, please contact Technical Support using the numbers listed under the “**Contact Us**” section of this manual. All openGear products are covered by a generous 5-year warranty

and will be repaired without charge for materials or labor within this period. See the “**Warranty and Repair Policy**” section in this manual for details.

Environmental Information

The equipment may contain hazardous substances that could impact health and the environment.

To avoid the potential release of those substances into the environment and to diminish the need for the extraction of natural resources, Ross Video encourages you to use the appropriate take-back systems. These systems will reuse or recycle most of the materials from your end-of-life equipment in an environmentally friendly and health conscious manner.

The crossed-out wheeled bin symbol invites you to use these systems.

If you need more information on the collection, reuse, and recycling systems, please contact your local or regional waste administration. You can also contact Ross Video for more information on the environmental performances of our products.

Introduction

In This Chapter

This chapter contains the following sections:

- Overview
- Functional Block Diagram
- User Interfaces
- Documentation Terms and Conventions

A Word of Thanks

Congratulations on choosing an openGear DMX-6259-A AES/EBU Audio De-Multiplexer with Fiber Optic Input. Thank you for joining the group of worldwide satisfied Ross Video customers!

Should you have a question pertaining to the installation or operation of your DMX-6259-A, please contact us at the numbers listed on the back cover of this manual. Our technical support staff is always available for consultation, training, or service.

Overview

This section briefly outlines the features of the DMX-6259-A series cards.

DMX-6259-A

The DMX-6259-A AES/EBU Audio De-Multiplexer with Fiber Optic Input is a broadcast quality de-embedder with one multi-rate SDI input which supports up to eight AES (16 channels) audio outputs. The AES outputs are 75ohm unbalanced. A single mode fiber interface with a LC/UPC connector provides an SDI input. A selectable coax input is also provided.

The DMX-6259-A can produce up to eight AES outputs, extracting them from any of the 16 possible audio channels of the SD or HD-SDI input. The AES outputs are 48kHz, synchronous with the video output. The AES outputs have the following adjustments available: delay, gain, and invert.

Card status and control parameters are displayed in the DashBoard Control System.

DMX-6259-A-H

The DMX-6259-A-H is a version of the DMX-6259-A that includes high sensitivity receive SFPs for increased link budget. The DMX-6259-A-H is compatible with standard 1310nm transmitters, and the CWDM transmitters from 1260nm to 1620nm (attenuation may be required to reduce optical power below -9dBm).

Features

The DMX-6259-A series cards include the following features:

- Supports HD-SD SDI SMPTE 292M, 1.5Gbps and SMPTE 259M, 270Mbps
- Supports AES-3id-2001, and EBU Tech 3250
- Supports de-embedding of non-PCM data such as Dolby® Digital and Dolby® E
- Audio de-embedding for all popular formats 480i, 576i, 720p, and 1080i
- Eight AES-3id 75ohm unbalanced outputs on DIN 1.0/2.3 connectors
- DMX-6259-A offers an optical input sensitivity of -18dBm
- DMX-6259-A-H offers an optical input sensitivity of -28dBm
- One SDI processed output
- Automatic input video format detection
- SNMP support available
- User defined loss of signal output
- Audio controls such as gain, invert, and delay
- Internally generated test patterns and test tones
- Reports status and configuration remotely via the DashBoard Control System
- Fits openGear frames
- 5-year transferable warranty

Functional Block Diagram

This section provides a functional block diagram that outlines the workflow of the DMX-6259-A series.

Figure 1.1 Simplified Block Diagram

User Interfaces

The DMX-6259-A series cards include the following user interfaces.

DashBoard Control System

The DashBoard Control System enables you to monitor and control openGear frames and cards from a computer. DashBoard communicates with other cards in the frame through the Network Controller Card.

For More Information on...

- installing and using DashBoard, refer to the *DashBoard User Manual*.
- menus available in DashBoard for the DMX-6259-A series, refer to the chapter “**DashBoard Menus**” on page 4-1.

Card-edge Controls

The front-edge of the DMX-6259-A series cards feature LED indicators for the power, video input status, and communication activity.

For More Information on...

- the card-edge controls and LEDs, refer to the section “**Card Overview**” on page 3-2.

SNMP Monitoring and Control

The Network Controller Card in the openGear frame provides optional support for remote monitoring of your frame and cards using the Simple Network Management Protocol (SNMP), which is compatible with many third-party monitoring and control tools.

For More Information on...

- enabling SNMP Monitoring and Control for your frame, refer to the *MFC-8300 Series* or *MFC-OG3 Series User Manual*.
- SNMP controls for the card, refer to the Management Information Base (MIB) for your card.

Documentation Terms and Conventions

The following terms and conventions are used throughout this manual.

Terms

The following terms are used:

- “**Board**” and “**Card**” refer to openGear terminal devices within openGear frames, including all components and switches.
- “**DFR-8321 series frame**” includes all versions of the DFR-8321 series and any available options unless otherwise noted.
- “**DMX-6259-A**” refers to the non-high sensitivity version of the card.
- “**DMX-6259-A-H**” refers to the high sensitivity version of the card.
- “**DMX-6259-A series**” refers to all versions of the card unless otherwise noted.
- “**OG3-FR series frame**” includes all versions of the OG3-FR series and any available options unless otherwise noted.
- “**openGear frame**” refers to DFR-8321 series and OG3-FR series frames that house the DMX-6259-A series card.
- “**Operator**” and “**User**” refer to the person who uses DMX-6259-A series card.
- “**PAL**” refers to PAL-B unless otherwise stated.
- “**System**” and “**Video system**” refer to the mix of interconnected production and terminal equipment in your environment.

Conventions

The following conventions are used:

- The “**Operating Tips**” and “**Note**” boxes are used to provide additional user information.

Installation

In This Chapter

This chapter provides instructions for installing the rear module(s) for the DMX-6259-A series card, installing the card into the openGear frame, cabling details, and updating the card software.

The following topics are discussed:

- Before You Begin
- Installing the DMX-6259-A Series
- Cabling
- Software Upgrades

Before You Begin

Before proceeding with the instructions in this chapter, ensure that your openGear frame is properly installed according to the instructions in its manual.

Static Discharge

Throughout this chapter, please heed the following cautionary note:

ESD Susceptibility — *Static discharge can cause serious damage to sensitive semiconductor devices. Avoid handling circuit boards in high static environments such as carpeted areas and when synthetic fiber clothing is worn. Always exercise proper grounding precautions when working on circuit boards and related equipment.*

Unpacking

Unpack each card you received from the shipping container and ensure that all items are included. If any items are missing or damaged, contact your sales representative or Ross Video directly.

Working with Fiber Optic Connectors

Keep the following in mind when working with fiber optic connectors:

- Every time you are required to insert a connector into a device or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors.
- Connectors must always be inserted into a device or have a dust cap on. Refer to **Figure 2.1** for dust cap locations.
- A poor optical connection is often similar to a poor electrical connection. Try removing the connector, cleaning, and re-inserting the connector. A bad connection can result in experiencing instability of signal, high loss, or a noisy signal.

Figure 2.1 Card Connectors with Dust Caps Installed

Installing the DMX-6259-A Series

This section outlines how to install a rear module and then your card in an openGear frame. You cannot install the DMX-6259-A series card in a DFR-8310 series or a DFR-8320 series frame.

Caution — *Never attempt to look down the barrel of a connected fiber or device transmitting an optical signal. The transmitted light is not in the visible spectrum and may cause permanent eye damage. Turn off all laser sources before disconnecting devices.*

Supported Rear Modules

This section outlines the rear modules supported by each model of the DMX-6259-A series card.

DMX-6259-A

The **8320AR-048A** Full Rear Module is required when installing the DMX-6259-A.

DMX-6259-A-H

The **8320AR-048A** Full Rear Module is required when installing the DMX-6259-A-H.

Installing a Rear Module

If the rear module is already installed, proceed to the section “**Installing the Card**” on page 2-4.

To install a rear module in your openGear frame

1. Locate the card frame slots on the rear of the openGear frame.
2. Remove the Blank Plate from the slot you have chosen for the card installation.
3. Remove the dust caps from the Fiber ports on the rear module that face the interior of the frame. Refer to **Figure 2.1** and **Figure 2.2** for dust cap locations.

Figure 2.2 Card Connectors with Dust Caps Removed — DMX-6259-A

4. Install the bottom of the rear module in the **Module Seating Slot** at the base of the frame’s back plane.
5. Align the top hole of the rear module with the screw on the top-edge of the frame back plane.

6. Using a Phillips screwdriver and the supplied screw, fasten the rear module to the back plane of the frame. Do not over tighten.
7. Ensure proper frame cooling and ventilation by having all rear frame slots covered with rear modules or blank plates.

Installing the Card

The card uses a single mode, LC/UPC connector to interface with the **8320AR-048A** Full Rear Module. This section outlines how to install the card in an openGear frame.

To install the card in a openGear frame

1. Locate the rear module you installed in the procedure “**Installing a Rear Module**” on page 2-3.
2. Ensure the rear module is the **8320AR-048A** Full Rear Module.
3. Remove the dust cap from the connector on the card end.
 - Refer to **Figure 2.1** and **Figure 2.3** for dust cap locations.
 - Before handling fiber optic components, refer to the *Important Regulatory and Safety Notices* document that shipped with your card.

Figure 2.3 Card Connectors with Dust Caps Removed — DMX-6259-A

4. Ensure that the exposed surface of the ceramic ferrule of the connector is clean. Refer to the section “**Working with Fiber Optic Connectors**” on page 2-2 for cleaning tips.
5. Hold the card by the edges and carefully align the card-edges with the slots in the frame.
6. Fully insert the card into the frame until the rear connection plus is properly seated in the rear module. You will feel a click when the card mates onto the rear module.
7. Affix the supplied rear module Label, as per the included instructions, to the BNC area of the rear module.
8. Remove the dust cap from the **Fiber 1** port (the topmost fiber optic port) on the rear module that faces the exterior of the frame.
9. Ensure the ceramic ferrule of the **Fiber 1** port connector is clean.
10. Cable your rear module as outlined in the section “**Cabling**” on page 2-5.

Cabling

This section provides information for connecting cables to the installed rear module. Connect the input and output cables according to the following sections.

The optical connector used to mate the card to the rear module is designed for blind mate optical connectors. All fiber interfaces are single mode fibers.

Caution — *Never attempt to look down the barrel of a connected fiber or device transmitting an optical signal. The transmitted light is not in the visible spectrum and may cause permanent eye damage. Turn off all laser sources before disconnecting devices.*

Cabling Overview

The DMX-6259-A series card is used with the **8320AR-048A** Full Rear Module. Each module occupies two slots and accommodates one card. This module provides one fiber input, one SDI input, one SDI output, and eight AES unbalanced outputs at 75ohm. (**Figure 2.4**)

Note — *You must use the **Setup** tab in DashBoard to specify which SDI Source to use as the input (BNC or Optical Port).*

Figure 2.4 Cable Designations for the 8320AR-048A Rear Module

Caution — *Do not exceed the maximum input power of -9dBm on the DMX-6259-A-H. Doing so will damage the card.*

Software Upgrades

This section provides instructions for upgrading the software for your card using the DashBoard client. The DashBoard client enables you to upload software updates to the card.

To upload software to the card

1. Contact Ross Technical Support for the latest software version file.
2. In DashBoard, display the **Device** tab of the card by double-clicking its status indicator in the **Basic Tree View**.
3. From the **Device** tab, click **Upload** to display the **Select File for upload** dialog box.
4. Navigate to the *.bin upload file you wish to upload. DashBoard automatically selects the last directory that you loaded from.
5. Click **Open** to display a confirmation dialog box. This dialog box displays the selected upload file name, type, size, and the file creation date.
6. From the **Confirmation** dialog box, select one of the following:
 - **Cancel** — Select this option to cancel the upload of the file and return to the **Device View**.
 - **Continue** — Select this option to upload the file. While uploading, an **Uploading Progress** dialog box opens.

Notice — Pressing the **Cancel** button while uploading will leave the card in an invalid state. Do not click **Cancel** unless the uploading progress has stopped completely for 60 seconds or more. If upload fails, repeat the upload process from DashBoard. If the upload process fails again, refer to the section “**Bootload Button**” on page 7-2.

7. Monitor the upgrade progress bar displayed in DashBoard while the software is upgraded on your card.
8. To complete the upgrade process, the card automatically reboots.

Note — The communications processor of the DMX-6259-A requires approximately 30 seconds to re-start and re-establish network communications.

- The card automatically saves all your settings before starting the reboot process.
- The status of all the cards in the frame are grayed out until the reboot process is complete.

User Controls

In This Chapter

This chapter provides a general overview of the user controls available on the front edge of the card.

The following topics are discussed:

- Card Overview
- Control and Monitoring Features
- Reference Compatibility
- Operation Notes

Card Overview

This section provides a general overview of the card components.

Figure 3.1 DMX-6259-A — Card-edge Components

1. Bootload Button

Use this button for factory service in the unlikely event of a complete card failure. Do not press this button unless instructed to do so by Ross Technical Support personnel.

2. Fiber Optic Connector

The card uses a blind mate, single mode, LC/UPC connector to interface with the 8320AR-048A Full Rear Module. The rear module is passive, which allows for the card to be replaced without the need to remove any connected BNC or fiber optic cables.

The fiber optic connector for the card includes a dust cap. The dust cap must stay on at all times when not installed in a frame. Ensure to keep the fibers end face clean and use the caps to protect the fiber from scratches and collecting dust.

3. Function Selection Switch (SW1), not shown

On legacy DMX-6259-A series cards, **SW1** works in conjunction with the Mode Select Switch (**SW2**) to select general functions and menu items. Refer to the chapter “**Card-edge Menus**” on page 5-1 for details.

4. Mode Select Switch (SW2), not shown

On legacy DMX-6259-A series cards, **SW2** is used to enable, disable, and select specific configuration within the operational function mode menus. Refer to the chapter “**Card-edge Menus**” on page 5-1 for details.

For More Information on...

- the LEDs located on the card-edge, refer to the section “**Status and Selection LEDs**” on page 3-3.
- handling fiber optic components, refer to the ***Important Regulatory and Safety Notices*** document that shipped with your card.
- using fiber connectors, refer to the section “**Working with Fiber Optic Connectors**” on page 2-2.

Control and Monitoring Features

This section provides information on the card-edge LEDs for the card. Refer to **Figure 3.2**.

Figure 3.2 Card-edge Controls

Note — Legacy DMX-6259-A series cards will include a card-edge 4-character display and the **SW1** and **SW2** switches. Refer to the chapter “**Card-edge Menus**” on page 5-1 for details on the card-edge menu system.

Status and Selection LEDs

The front-edge of the card has LED indicators for the power, video input status, and communication activity. Basic LED displays and descriptions are provided in **Table 3.1**.

Table 3.1 LEDs on the DMX-6259-A

LED	Color	Display and Description
OK/ERROR	Green	When lit green, this LED indicates that the card is functioning normal and that no anomalies have been detected. The following conditions must be satisfied: • a valid input signal is present • a valid reference signal is present when a reference is required, and that the reference standard matches the input standard.
	Flashing Green	When flashing green, this LED indicates the bootloader is waiting for a software upload.
	Flashing Green and Orange	When lit green with flashing orange, this LED indicates there is a signal error such as a missing or invalid input or reference.
	Orange	When lit orange, this LED indicates the card is powering on.
	Red	When lit red, this LED indicates the card is not operational.
	Off	When off, this LED indicates there is no power to the card.

Table 3.1 LEDs on the DMX-6259-A

LED	Color	Display and Description
VIDEO OK	Green	When lit, this LED indicates that the video input is valid.
	Flashing Green	When flashing, this LED indicates that video is present, but the input format is unsupported.
	Off	When unlit, this LED indicates the absence of an input signal.
REF OK	Green	When lit green, this LED indicates a valid reference signal.
	Flashing Green	When flashing, this LED indicates that the reference signal is present but the format is invalid.
	Off	When unlit, this LED indicates that a reference signal is not present, or is not supported.
AES 1 OK	Yellow	When lit, this LED indicates the presence of the embedded audio Group 1 on the video input.
AES 2 OK	Yellow	When lit, this LED indicates the presence of the embedded audio Group 2 on the video input.
AES 3 OK	Yellow	When lit, this LED indicates the presence of the embedded audio Group 3 on the video input.
AES 4 OK	Yellow	When lit, this LED indicates the presence of the embedded audio Group 4 on the video input.
AES 5 OK	Yellow	This LED is not implemented.
AES 6 OK	Yellow	This LED is not implemented.
AES 7 OK	Yellow	This LED is not implemented.
AES 8 OK	Yellow	This LED is not implemented.

Reference Compatibility

It is important to remember that if you are using the source connected to either **Frame 1** or **Frame 2** BNCs on the openGear series frames as the reference, the input video frame rate must match the reference frame rate. Refer to **Table 3.2** for frame rate compatibility.

Table 3.2 Compatible Video Formats

Reference	Output					
	480i/59.94	720p/59.94	1080i/59.94	576i/50	1080i/50	720p/50
480i/59.94	✓	✓	✓			
720p/59.94	✓	✓	✓			
1080i/59.94	✓	✓	✓			
576i/50				✓	✓	✓
720p/50				✓	✓	✓
1080i/50				✓	✓	✓

Operation Notes

This section provides brief notes when operating the card such as using the proc amp control, the minimum delay, and de-embedding PCM versus Non-PCM signals.

Audio Proc Amp Controls

The card includes Processing Amplifiers (Proc Amps) for the audio outputs on the card. Note that these features are not available when using the card-edge controls.

Proc Amp adjustments are applied in the following order:

1. **Delay** — This option enables you to adjust the delay of the audio channel. If you have enabled the Delay Lock feature, changing the delay value for one channel automatically changes the value for the other channel.
2. **Gain** — This option allows you to adjust the gain by +/- 20dB in 1dB increments. If you have enabled the Gain Lock feature, changing the gain value for one channel automatically changes the value for the other channel.
3. **Invert** — This option enables you to invert the polarity of the audio signal for the selected channel.

Minimum Delay Overview

The line buffer stores incoming video in relation to the incoming video clock timing. The video data is then read out in relation to the reference timing. This allows the input video to be switched between sources that may not be perfectly timed without timing glitches. Video source timing must remain within the buffer window to properly switch between sources. **Table 3.3** provides information on the buffer window available depending on how the Minimum Delay feature is configured in DashBoard.

Table 3.3 Minimum Delay

If the option is...	Format	Minimum Delay	Maximum Delay
Disabled	SD	1/4 line	1/2 line
	HD	1/4 line	1/2 line
Enabled	SD	1/8 line	1/4 line
	HD	1/16 line	1/8 line

De-embedding Non-PCM Signals

Note — *When de-embedding non-PCM signals, channel pairs must be kept together.*

To configure the card to de-embed non-PCM signals

1. Launch DashBoard on your computer and display the **Device View** for the card you wish to configure.
2. Select the **AES Outputs** tab for the output channel you wish to configure.
3. Set the **Channel Gain** to **0**.
4. Clear the applicable **Ch Invert** check box to disable inverting on the channel.

DashBoard Menus

In This Chapter

This chapter briefly summarizes the menus, items, and parameters available from the DashBoard Control System for the card. Parameters marked with an asterisk (*) are the factory default values.

The following topics are discussed:

- Status Tabs
- Setup Tab
- Input Status Tab
- AES Outputs 1-8 Tabs
- Embedded Outputs Tab
- Alarm Enables Tab

Operating Tip — *Wait 30 seconds after the last setting change to ensure all changes are saved to the non-volatile memory of the card.*

Status Tabs

This section summarizes the read-only information displayed in the Status tabs. The fields in the **Status** tabs vary in severity from green (valid), yellow (caution), to red (alarm). DashBoard reports the most severe alarm for a single field.

Signal Tab

Table 4.1 summarizes the read-only information displayed in the **Signal** tab.

Table 4.1 Signal Tab Items

Tab Title	Item	Parameters	Description
Signal	Signal Status	OK	Indicates when the card is functioning normally or if anomalies are detected
		No Input	
		Invalid Format	
		Incompatible	
		Non-Sync Video	
		Group Not Present	
		Group Channel Silent	
	Audio Status	OK	Indicates the status of the audio source
		PCM - Silent	
		Source Async	
		Group 4 Reduced to 20bit ^a	
	Reference Status	OK	Indicates that a valid reference source is present
		No Ref - Video	The following conditions are occurring: • Card reference is set to Frame 1 or Frame 2 • A valid reference signal is not present • Card has gone to Video Timing Mode
		No Ref - Free Run	The following conditions are occurring: • Card reference is set to Frame 1 or Frame 2 • A valid reference signal is not present • A valid video signal is not present • Card has gone to Free Run Mode
		Invalid Format - Video	Card has detected an invalid ^b reference format and has switched to Video Timing Mode
		Invalid Format - Free Run	The following conditions are occurring: • Card has detected an invalid^b reference format • Input video is missing or invalid • Card has switched to Free Run Mode

Table 4.1 Signal Tab Items

Tab Title	Item	Parameters	Description
Signal	Input Format	#	Indicates the input video format
	Reference Format	#	Indicates the reference video format
	Output Format	#	Indicates the output video format
	Optical Module Status	OK	Indicates the status of the card Optical Module
		Temp High	
		Temp Low	
		Rx Power High	
		Rx Power Low	
		Rx Fault	
		Not Detected	
	Optical Rx Power (dBm)	#	Indicates the power at the optical input. This value is accurate to ± 3 dBm.
Signal — Embedded Audio Status	Group #	PCM	Indicates the status of the incoming embedded audio
		No Input	
		PCM-Silent	
		Non-PCM	
		Async	
		Mixed	

- This parameter indicates that there are more than 3 groups of 24bit SD embedded audio sources.
- Refer to the section “**Reference Compatibility**” on page 3-5 for a complete list of supported references.

Hardware Tab

Table 4.2 summarizes the read-only information displayed in the **Hardware** tab.

Table 4.2 Hardware Tab Items

Tab Title	Item	Parameters	Description
Hardware	HW Status	OK	Indicates the status of the hardware including the SFP module. Some messages displayed are dependent on the settings in the Alarms Enable tab
		FPGA load invalid	
		Incomp I/O module	
		Current out of spec	
		Internal Error	
		SFP Temp Low	
		SFP Temp High	
		SFP Power High	
		SFP Power Low	
		SFP Not Detected	
	Voltage (mV)	#	Supply Voltage
	Current (mA)	#	Current consumption of card

Table 4.2 Hardware Tab Items

Tab Title	Item	Parameters	Description
Hardware	Optical Module Temperature (C)	#	Indicates the optical module temperature
	CPU Headroom	#	Processing power available
	RAM Available	##/###	On-board processing memory available
	Uptime (h)		Displays the number of hours since the last reboot of the card
	Configuration Bank	#	Storage count

Product Tab

Table 4.3 summarizes the read-only information displayed in the **Product** tab.

Table 4.3 Product Tab Items

Tab Title	Item	Parameters	Description
Product	Product	DMX-6259-A, or DMX-6259-A-H	
	Supplier	Ross Video Ltd.	
	Board Rev	##	Indicates the board version
	Rear Module	#	Type of rear module in the slot
	Board S/N	#####	Indicates the board serial number
	Software Rev	##.##	Indicates the software version
	Firmware Rev	#.###	Indicates the firmware version

Setup Tab

Table 4.4 summarizes the **Setup** options available in DashBoard.

Table 4.4 Setup Menu Items

Menu Title	Item	Parameters	Description
Setup	SDI Source	Copper	Assigns the BNC as the SDI input source
		Optical*	Assigns Optical Port 1 as the SDI input source
	Reference	Frame 1*	Specifies the reference source
		Frame 2	
		Video	
	Minimum Delay	Selected*	Provides the shortest video delay through the card. When using SD, the delay is 7 μ s. When using HD, the delay is 1.5 μ s.
		Cleared	The total video delay through the card will be the values above plus half a video line
	Loss of Input	Black	Sets the output to Black in the event of a loss of video input
		Blue	Sets the output to Blue in the event of a loss of video input
		Custom*	Sets the output to a custom color in the event of a loss of video input. Use the Y, Cr, and Cb sliders to configure the color.
	Loss of Input	Y slider	Sets the luminance component of the Loss of Input Custom video signal.
		Cr slider	Sets the Cr component of the Loss of Input Custom video signal.
		Cb slider	Sets the Cb component of the Loss of Input Custom video signal.
	Test Pattern ^a	None	Disables the test pattern feature
		100% Color Bars	Specifies the type of test pattern to output
		Frequency Sweep	
		Black	
		Blue	
		Matrix Pathological	
		Luma Ramp	
		Y/C Ramp	
		75% SMPTE Bars	
	SD Audio	20 Bit*	Embeds 20bit audio
		24 Bit	Embeds 24bit audio
		Auto	Embeds 20-24bit audio depending on the source and number of bits

Table 4.4 Setup Menu Items

Menu Title	Item	Parameters	Description
Setup	Silence Threshold (dB)	-96 to 0	Audio below the specified threshold value is considered silent
	Silence Timeout (sec)	1 to 60	Audio silent for longer than the specified value raises an alarm
	Edit Permission	Unlocked*	All menu options are unlocked and can be edited.
		Locked	All menu items, except this one, are locked and read-only.
	All Audio	Reset	Resets the parameters in the Embedded Audio Outputs tab to factory defaults
	Factory Defaults	Reset	Resets all parameters to factory defaults.

- a. This setting is not retained on power down.

Input Status Tab

Table 4.5 summarizes the **Input Status Menu** options available in DashBoard.

Table 4.5 Input Status Menu Items

Menu Title	Item	Parameters	Description
Input Status	Input Format (Read-only)	#	Displays the format of the video input
	CRC Errors (Read-only)	#	Displays the count of the CRC errors on the video input. This 14bit counter is reset on loss of video, or by user request. The counter is non-latching, and will roll over from maximum count to zero. • For SD formats, it displays both active picture and full frame errors. • For HD formats, it displays the total count of errors.
	Error Count	Reset	Resets the CRC Errors field
	Embedded Audio - Group # Channel # (Read-only)	PCM	Displays the status of each group and channel of embedded audio
		No Input	
		PCM-Silent	
		Non-PCM	
		Async	
		Mixed	
	Word Length (Read-only)	#bit	Displays the word length of the audio in number of bits

AES Outputs 1-8 Tabs

Table 4.6 summarizes the AES Outputs 1-4 and AES Outputs 5-8 options available in DashBoard.

Table 4.6 AES Outputs Menu Items

Menu Title	Item	Parameters	Description
AES #	Ch A Source	Mute	Selects the source of the AES output
		Group # Ch#	
		#Hz	
		#kHz	
	Ch B Source	Same as above	
	Ch A Delay (ms)	0* to 1000	Adjusts the delay of the audio channel
	Ch B Delay (ms)	Same as above	
	Delay Lock	Selected*	Locks the Delay slider of both channels together. If the values for the two channels are different, that change is maintained when the channels are locked.
		Cleared	The Delay slider is unlocked
	Ch A Gain (dB)	-20 to +20 ^a	Adjusts the gain of the audio channel
	Ch B Gain (dB)	Same as above	
	Gain Lock	Selected*	Locks the Gain slider of both channels together. If the values for the two channels are different, that change is maintained when the channels are locked.
		Cleared	The Gain slider is unlocked
	Ch A Invert	Selected	Inverts the audio signal of the channel
		Cleared*	The audio signal is not inverted
	Ch B Invert	Same as above	
	Output	Reset	Resets the parameters for the selected output to the default values
	Outputs #-#	Reset	Resets the indicated output parameters to the default values

a. The default value is 0.

Embedded Outputs Tab

Table 4.7 summarizes the **Embedded Outputs Menu** options available in DashBoard.

Table 4.7 Embedded Outputs Menu Items

Menu Title	Item	Parameters	Description
Group #	Enable	Selected*	Determines if the group is inserted in the output or not
		Cleared	
	Ch # Source	Mute	Configures the Primary Source that is inserted in to the embedded group if present
		Group# Ch#	
		#Hz Tone	
		#kHz Tone	
	Group #	Reset	Resets the specific group sources to the default values
	All Groups	Reset	Resets all groups to the default values

Alarm Enables Tab

Table 4.8 summarizes the Alarm Enables options available in DashBoard.

Table 4.8 Alarms Menu Items

Menu Title	Item	Parameters	Description
Video Input & Reference Alarm	No Input	Selected*	Signal Status field reports a loss of input
		Cleared	Disables the alarm
	Invalid Input	Selected*	Input Format field displays an alarm when the input video is a format that is not supported
		Cleared	Disables the alarm
	Incompatible Input	Selected*	Input Format field reports when the frame rate is not the same as the reference input
		Cleared	Disables the alarm
	Non-Sync Input	Selected*	Signal Status field reports if the video input is asynchronous to the reference
		Cleared	Disables the alarm
	No Reference	Selected*	Reference Status field reports loss of input conditions
		Cleared	Disables the alarm
	Invalid Reference	Selected*	Reference Format field reports when the reference is a format that is not supported
		Cleared	Disables the alarm
Hardware	Incompat Rear Module	Selected*	Hardware Status field reports when a rear module is not compatible with the card
		Cleared	Disables the alarm
Optical Module Alarms	Alarm on Abnormal Temperature	Selected*	Hardware Status field reports when the temperature of the SFP module is not in range (high/low)
		Cleared	Disables the alarm
	Alarm on Abnormal Power	Selected*	Hardware Status field reports when the power consumption of the SFP module is not in range (high/low)
		Cleared	Disables the alarm
	Alarm on Not Detected	Selected*	Hardware Status field reports when the optical module is not detected
		Cleared	Disables the alarm
Embedded Input Audio - Group #	Group not present	Selected*	Signal Status field reports when a group is not present on the input
		Cleared	Disables the alarm
	Channel # Silent	Selected*	Signal Status field reports when the specified channel is detected as silent
		Cleared	Disables the alarm

Table 4.8 Alarms Menu Items

Menu Title	Item	Parameters	Description
AES Outputs - AES #	Source Missing	Selected*	Audio Status field reports when the source is not detected
		Cleared	Disables the alarm
	Source Async	Selected*	Audio Status field reports when the selected output source is asynchronous to the input video
		Cleared	Disables the alarm
Embedded Outputs - Group #	Source Missing	Selected*	Embedded Audio Status field reports when the selected source is not present or is silent
		Cleared	Disables the alarm
	Source Async	Selected*	Embedded Audio Status field reports when the selected source is asynchronous to the input video
		Cleared	Disables the alarm
	SD 24Bit	Selected*	Audio Status field reports when the selected configuration would embed 4 groups of 24bit audio in an SD output. Group 4 is down-sampled to 20bit audio.
		Cleared	Disables the alarm
	All Alarms	Set	Enables all alarms
	All Alarms	Clear	Disables all alarms

Card-edge Menus

In This Chapter

This section summarizes the Card-edge Menu system of the DMX-6259-A and how to navigate the menus and options using the **SW1** and **SW2** switches on the DMX-6259-A card-edge.

Note — *This chapter only applies to legacy DMX-6259-A series cards with the card-edge 4-character display and the **SW1** and **SW2** switches.*

The following topics are discussed:

- Navigating the Card-edge Menu System
- Card-edge Menus
- Menu Descriptions

Navigating the Card-edge Menu System

This section summarizes how to navigate the menus and options using the **SW1** and **SW2** switches on the card-edge.

To navigate the card-edge menus

1. Rotate **SW1** to the required menu.
2. Toggle **SW2** to select the required parameter.

Note — *Do not power down the card before ensuring that all edited parameters are saved. Saving edited parameters can take up to 10 seconds.*

Card-edge Menus

Table 5.1 lists all the menus, and menu items available using the card-edge controls. To activate some of these parameters, it may be necessary to toggle **SW2** in either direction, or it may require that **SW2** be held in either direction for a few seconds. Default values are indicated with an asterisk (*). Refer to the section “**Menu Descriptions**” on page 5-5 for a brief summary of the menus available on the card-edge.

Table 5.1 Card-edge Menus and Items

Menu Select	Card-Edge Menu Label	Menu Name	Card-Edge Item Label	Item Name
0	DMX-6259-A slot #, or DMX-6259-A-H slot #	Home		
1	Fact Def	Factory Default	n/a	Factory Default
2	Ref Src	Reference Source	Fr 1*	Frame 1 Reference
			Fr 2	Frame 2 Reference
			Vid	Video
3	LOI	Loss of Input	Black	
			Blue	
			Custom*	
4	Test Patt	Test Pattern	None*	
			75%	SMPTE Bars
			YC Ramp	Y/C Ramp
			L Ramp	Luma Ramp
			Matr Path	Matrix Pathological
			Blue	Flat Field Blue
			Black	Flat Field Black
			Frq Swp	Frequency Sweep
5	Grp Sel	Group Select	100%	100% Full Field Bars
			Grp 1	Group 1
			Grp 2	Group 2
			Grp 3	Group 3
6	Grp Enbl	Group Enable	Grp 4	Group 4
			Enabled*	
			Disabled	

Table 5.1 Card-edge Menus and Items

Menu Select	Card-Edge Menu Label	Menu Name	Card-Edge Item Label	Item Name
7	Ch1 Src	Channel 1 Source	Mute	
			T4k	4kHz Tone
			T2k	2kHz Tone
			T1k	1kHz Tone
			T.5k	500Hz Tone
			G1C1 - G4C4	Group 1, Channel 1 to Group 4, Channel 4
8	Ch2 Src	Channel 2 Source	Same as above	
9	Ch3 Src	Channel 3 Source	Same as above	
A	Ch4 Src	Channel 4 Source	Same as above	
B	AES Sel	AES Output Select	AES1*- AES8	AES 1 to AES 8
C	ChA Src	Channel A Source	G1C1 - G4C4	Group 1, Channel 1 to Group 4, Channel 4
D	ChB Src	Channel B Source	Same as above	

Menu Descriptions

This section briefly summarizes the menu parameters available in the card-edge display.

0 — Home

This read-only menu displays the product name and the slot the card is installed in the frame.

1 — Factory Defaults

This function enables you to return all controls to their factory default values.

To reset the card parameters to factory default values using the card-edge controls:

1. Rotate **SW1** to **1**. The Four Character Display displays “**Fact Def**”.
2. Toggle **SW2** down and hold for 3 seconds.
3. Release **SW2**.

2 — Reference Source

This menu enables you to select where the card will look for a reference. The choices are Frame Reference 1 (**Fr 1**), Frame Reference 2 (**Fr 2**), and Video (**Vid**). Refer to the section “**Reference Compatibility**” on page 3-5 for details.

3 — Loss of Input

Use this menu to select what type of video displays at the system’s outputs when the input video signal is lost or invalid.

4 — Test Pattern

This menu enables you to specify the type of test pattern to output. Note that this setting is not retained on power down.

5 — Group Select

This menu enables you to select the embedded group before assigning sources to the channels, enabling the group, and selecting backup sources. This menu is used in conjunction with Menus 6 to E.

6 — Group Enable

Use this menu to determine if the selected group is embedded in the output or not.

7, 8, 9, A — Channel # Source

Use Menus 7 to A to configure the source that is inserted into the embedded group if present. These menus are used in conjunction with Menu 5 (Group Select). The following are the default values based on the group selected:

- Group 1 — When Menu 5 is set to Grp1, the default value of Menu 7 is G1C1.
- Group 2 — When Menu 5 is set to Grp 2, the default value of Menu 8 is G2C2.
- Group 3 — When Menu 5 is set to Grp 3, the default value of Menu 9 is G3C3.
- Group 4 — When Menu 5 is set to Grp 4, the default value of Menu A is G4C4.

B — AES Select

Use Menu B to specify an AES output to configure. This menu is used in conjunction with Menus C (Channel A Source) and D (Channel B Source). The default value is AES1.

C — Channel A Source

Use Menu C to select the Channel A source for a specific AES output. This menu is used in conjunction with Menu B (AES Select). The following are the default values based on the AES selected:

- When Menu B is set to AES1, the default value of Menu C is G1C1.
- When Menu B is set to AES2, the default value of Menu C is G1C3.
- When Menu B is set to AES3, the default value of Menu C is G2C1.
- When Menu B is set to AES4, the default value of Menu C is G2C3.
- When Menu B is set to AES5, the default value of Menu C is G3C1.
- When Menu B is set to AES6, the default value of Menu C is G3C3.
- When Menu B is set to AES7, the default value of Menu C is G4C1.
- When Menu B is set to AES8, the default value of Menu C is G4C3.

D — Channel B Source

Use Menu D to select the Channel B source for a specific AES output. This menu is used in conjunction with Menu B (AES Select). The following are the default values based on the AES selected:

- When Menu B is set to AES1, the default value of Menu D is G1C2.
- When Menu B is set to AES2, the default value of Menu D is G1C4.
- When Menu B is set to AES3, the default value of Menu D is G2C2.
- When Menu B is set to AES4, the default value of Menu D is G2C4.
- When Menu B is set to AES5, the default value of Menu D is G3C2.
- When Menu B is set to AES6, the default value of Menu D is G3C4.
- When Menu B is set to AES7, the default value of Menu D is G4C2.
- When Menu B is set to AES8, the default value of Menu D is G4C4.

Specifications

In This Chapter

This chapter provides technical specification details on the card. Note that specifications are subject to change without notice.

The following topics are discussed:

- DMX-6259-A Technical Specifications
- DMX-6259-A-H Technical Specifications
- Channel Status Data Table

DMX-6259-A Technical Specifications

This section includes the technical specifications for the DMX-6259-A.

Table 6.1 DMX-6259-A Technical Specifications

Category	Parameter	Specification
Optical Input	Number of Inputs	1
	SMPTE Standards Accommodated	SMPTE 259M, SMPTE 292M
	Operating Wavelength Range	1210nm to 1620nm
	Input Power Operating Range (Color Bars)	• -3dBm to -18dBm @ 2.97Gbps • -3dBm to -19dBm @ 270Mbps and 1.5Gbps
	Input Power Operating Range (Pathological)	• -3dBm to -17dBm @ 2.97Gbps • -3dBm to -18dBm @ 270Mbps and 1.5Gbps
	Receiver Overload	At values above -3dBm
	Connector	Single mode, LC/UPC
SDI Input	Number of Inputs	1
	SDI Data Rates and SMPTE Standards Accommodated	SMPTE 259M, SMPTE 292M
	Impedance	75ohm terminating
	Return Loss	>15dB to 1.485GHz >10dB from 1.485GHz to 2.97GHz
	Cable Length with Equalizer (Belden 1694A cable)	SD: < 450m (1476ft) HD: < 170m (558ft) 3G: < 100m (328ft)
	Connector Type	BNC
SDI Output	Number of Outputs	1
	SDI Data Rates and SMPTE Standards Accommodated	SMPTE 259M, SMPTE 292M
	Impedance	75ohm
	Return Loss	>15dB to 1.485GHz >10dB 1.485GHz to 2.97GHz
	Signal Level	800mV, $\pm 10\%$
	DC Offset	0V ± 50 mV
	Rise and Fall Time (20-80%)	• 700ps typical @ 270Mbps • 120ps typical @ 1.485Gbps, 2.97Gbps
	Overshoot	<10%
	Connector Type	BNC

Table 6.1 DMX-6259-A Technical Specifications

Category	Parameter	Specification
AES Outputs	Number of Outputs	8 AES-3id outputs
	Impedance	75ohm
	Resolution	24bits
	Voltage	1V p-p
	Sampling Rate	48kHz
	Connector Type	DIN 1.0/2.3
Environmental	Operating Range	5°C to 40°C ambient
Power	Total Power Consumption	<8W

DMX-6259-A-H Technical Specifications

This section includes the technical specifications for the DMX-6259-A-H.

Caution — Do not exceed the maximum input power of -9dBm on the DMX-6259-A-H. Doing so will damage the card.

Table 6.2 DMX-6259-A-H Technical Specifications

Category	Parameter	Specification
Optical Input	Number of Inputs	1
	SMPTE Standards Accommodated	SMPTE 292M, SMPTE 259M
	Operating Wavelength Range	1260nm to 1620nm
	Input Power Operating Range (Color Bars)	• -9dBm to -28dBm @ 2.97Gbps • -9dBm to -28dBm @ 270Mbps and 1.5Gbps
	Input Power Operating Range (Pathological)	• -9dBm to -28dBm @ 2.97Gbps • -9dBm to -28dBm @ 270Mbps and 1.5Gbps
	Receiver Overload	At values above -9dBm
	Maximum Input Power	-9dBm
	Connector	Single Mode, LC/UPC, APD
SDI Input	Number of Inputs	1
	SDI Data Rates and SMPTE Standards Accommodated	SMPTE 259M, SMPTE 292M
	Impedance	75ohm terminating
	Return Loss	>15dB to 1.485GHz >10dB from 1.485GHz to 2.97GHz
	Cable Length with Equalizer (Belden 1694A cable)	SD: < 450m (1476ft) HD: < 170m (558ft) 3G: < 100m (328ft)
	Connector Type	BNC
SDI Output	Number of Outputs	1
	SDI Data Rates and SMPTE Standards Accommodated	SMPTE 259M, SMPTE 292M
	Impedance	75ohm
	Return Loss	>15dB to 1.485GHz >10dB 1.485GHz to 2.97GHz
	Signal Level	800mV, $\pm 10\%$
	DC Offset	0V ± 50 mV
	Rise and Fall Time (20-80%)	• 700ps typical @ 270Mbps • 120ps typical @ 1.485Gbps, 2.97Gbps
	Overshoot	<10%
	Connector Type	BNC

Table 6.2 DMX-6259-A-H Technical Specifications

Category	Parameter	Specification
AES Outputs	Number of Outputs	8 AES-3id outputs
	Impedance	75ohm
	Resolution	24bits
	Voltage	1V p-p
	Sampling Rate	48kHz
	Connector Type	DIN 1.0/2.3
Environmental	Operating Range	5°C to 40°C ambient
Power	Total Power Consumption	<8W

Channel Status Data Table

The following table shows the channel status bit information that is used for all output audio.

Table 6.3 Channel Status Data

Byte	Bit	Function	Transmitted
0	0	Professional or Consumer use of Channel Status Block	Professional (1)
	1	Normal Audio or Non-Audio Mode	Normal Audio (0)
	2-4	Emphasis	No Emphasis (100)
	5	Lock Indication	Locked (0)
	6-7	Sampling Rate	48kHz (01)
1	0-3	Channel Mode	2 channel stereo (0001)
	4-7	User Bit Mode	192-bit (0001)
2	0-2	Auxiliary Bit Usage	20-bit audio sample, Aux bits undefined (000)
	3-5	Sample Word Length	20- or 24-bits (101)
	6-7	Alignment Level	Not Indicated (00)
3	0-7	Multi-channel Modes	Undefined (0)
4	0-1	Digital Audio Reference Signal	Not a Reference (0)
	2	Reserved	0
	3-6	Sampling Frequency	Not Indicated (0000)
	7	Sampling Frequency Scaling Flag	No Scaling (0)
5	0-7	Reserved	Unused (0)
6-9		ASCII Source ID	Unused (0)
10-13		ASCII Destination ID	Unused (0)
14-17		Local Sample Address	Unused (0)
18-21		Time of Day	Unused (0)
22	0-7	C data reliability	Only the first 5 Status Bytes are marked as Reliable All other Status Bytes are marked as Unreliable
23	0-7	CRC	Calculated CRC

Passing the Status Bytes

The DMX-6259-A series card replaces Channel Status Bytes according to **Table 6.3** or passes Status Bytes through from input to output. In order for the Channel Status Bytes on the incoming embedded stream to be re-embedded, the outgoing Data Word Length must match the specified word length in the Channel Status bits.

Service Information

In This Chapter

This chapter contains the following sections:

- Troubleshooting Checklist
- Warranty and Repair Policy

Troubleshooting Checklist

Routine maintenance to this openGear product is not required. In the event of problems with your DMX-6259-A series card, the following basic troubleshooting checklist may help identify the source of the problem. If the frame still does not appear to be working properly after checking all possible causes, please contact your openGear products distributor, or the Technical Support department at the numbers listed under the “**Contact Us**” section.

1. **Visual Review** — Performing a quick visual check may reveal many problems, such as connectors not properly seated or loose cables. Check the card, the frame, and any associated peripheral equipment for signs of trouble.
2. **Power Check** — Check the power indicator LED on the distribution frame front panel for the presence of power. If the power LED is not illuminated, verify that the power cable is connected to a power source and that power is available at the power main. Confirm that the power supplies are fully seated in their slots. If the power LED is still not illuminated, replace the power supply with one that is verified to work.
3. **Input Signal Status** — Verify that source equipment is operating correctly and that a valid signal is being supplied.
4. **Output Signal Path** — Verify that destination equipment is operating correctly and receiving a valid signal.
5. **Unit Exchange** — Exchanging a suspect unit with a unit that is known to be working correctly is an efficient method for localizing problems to individual units.

Bootload Button

In the unlikely event of a complete card failure, you may be instructed by a Ross Technical Support specialist to perform a complete software reload on the card.

To reload the software on a card

1. Eject the card from the frame.
2. Press and hold the **Bootload** button, while re-inserting the card into the frame.
3. Release the button.
 - The **OK/ERROR** LED will flash green while the card is waiting for a new software load.
 - If a new software load is not sent to the card within 60 seconds, the card will attempt to restart with its last operational software load.
 - Software loads can be sent to the card via the connection on the rear of the frame.

Warranty and Repair Policy

The DMX-6259-A series card is warranted to be free of any defect with respect to performance, quality, reliability, and workmanship for a period of FIVE (5) years from the date of shipment from our factory. In the event that your DMX-6259-A series card proves to be defective in any way during this warranty period, Ross Video Limited reserves the right to repair or replace this piece of equipment with a unit of equal or superior performance characteristics.

Should you find that this DMX-6259-A series card has failed after your warranty period has expired, we will repair your defective product should suitable replacement components be available. You, the owner, will bear any labor and/or part costs incurred in the repair or refurbishment of said equipment beyond the FIVE (5) year warranty period.

In no event shall Ross Video Limited be liable for direct, indirect, special, incidental, or consequential damages (including loss of profits) incurred by the use of this product. Implied warranties are expressly limited to the duration of this warranty.

This DMX-6259-A Series User Manual provides all pertinent information for the safe installation and operation of your openGear Product. Ross Video policy dictates that all repairs to the DMX-6259-A series card are to be conducted only by an authorized Ross Video Limited factory representative. Therefore, any unauthorized attempt to repair this product, by anyone other than an authorized Ross Video Limited factory representative, will automatically void the warranty. Please contact Ross Video Technical Support for more information.

In Case of Problems

Should any problem arise with your DMX-6259-A series card, please contact the Ross Video Technical Support Department. (Contact information is supplied at the end of this publication.)

A Return Material Authorization number (RMA) will be issued to you, as well as specific shipping instructions, should you wish our factory to repair your DMX-6259-A series card. If required, a temporary replacement frame will be made available at a nominal charge. Any shipping costs incurred will be the responsibility of you, the customer. All products shipped to you from Ross Video Limited will be shipped collect.

The Ross Video Technical Support Department will continue to provide advice on any product manufactured by Ross Video Limited, beyond the warranty period without charge, for the life of the equipment.
