Thank You for Choosing Ross

You've made a great choice. We expect you will be very happy with your purchase of Ross Technology.
Our mission is to:
1. Provide a Superior Customer Experience
   • offer the best product quality and support
2. Make Cool Practical Technology
   • develop great products that customers love
Ross has become well known for the Ross Video Code of Ethics. It guides our interactions and empowers our employees. I hope you enjoy reading it below.
If anything at all with your Ross experience does not live up to your expectations be sure to reach out to us at solutions@rossvideo.com.

David Ross
CEO, Ross Video
dross@rossvideo.com

Ross Video Code of Ethics

Any company is the sum total of the people that make things happen. At Ross, our employees are a special group. Our employees truly care about doing a great job and delivering a high quality customer experience every day. This code of ethics hangs on the wall of all Ross Video locations to guide our behavior:
1. We will always act in our customers’ best interest.
2. We will do our best to understand our customers’ requirements.
3. We will not ship crap.
4. We will be great to work with.
5. We will do something extra for our customers, as an apology, when something big goes wrong and it's our fault.
6. We will keep our promises.
7. We will treat the competition with respect.
8. We will cooperate with and help other friendly companies.
9. We will go above and beyond in times of crisis. If there's no one to authorize the required action in times of company or customer crisis - do what you know in your heart is right. (You may rent helicopters if necessary.)

Notice

The material in this manual is furnished for informational use only. It is subject to change without notice and should not be construed as commitment by Ross Video Limited. Ross Video Limited assumes no responsibility or liability for errors or inaccuracies that may appear in this manual.

Safety Notices

Refer to the “Important Regulatory and Safety Notices” document that accompanied your product.

Statement of Compliance

This product has been determined to be compliant with the applicable standards, regulations, and directives for the countries where the product is marketed.

Compliance documentation, such as certification or Declaration of Compliance for the product is available upon request by contacting techsupport@rossvideo.com. Please include the product; model number identifiers and serial number and country that compliance information is needed in request.

EMC Notices

US FCC Part 15

This equipment has been tested and found to comply with the limits for a class A Digital device, pursuant to part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a Commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio
communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**Notice** — Changes or modifications to this equipment not expressly approved by Ross Video Ltd. could void the user’s authority to operate this equipment.

**Canada**

This Class “A” digital apparatus complies with Canadian ICES-003 and part 15 of the FCC Rules.

Cet appareil numérique de la classe “A” est conforme à la norme NMB-003 du Canada.

**European Union**

This equipment is in compliance with the essential requirements and other relevant provisions established under regulation (EC) No 765/2008 and Decision No 768/2008/EC referred to as the “New Legislative Framework”.

**Warning** — This equipment is compliant with Class A of CISPR 32. In a residential environment this equipment may cause radio interference.

**Australia/New Zealand**

This equipment is in compliance with the provisions established under the Radiocommunications Act 1992 and Radiocommunications Labeling (Electromagnetic Compatibility) Notice 2008.

**Korea**

This equipment is in compliance with the provisions established under the Radio Waves Act.

Class A equipment (Broadcasting and communications service for business use)

This device is a business-use (Class A) EMC-compliant device. The seller and user are advised to be aware of this fact. This device is intended for use in areas outside home.

<table>

</tbody>
</table>

**International**

This equipment has been tested under the requirements of CISPR 22:2008 or CISPR 32:2015 and found to comply with the limits for a Class A Digital device.

**Notice** — This is a Class A product. In domestic environments, this product may cause radio interference, in which case the user may have to take adequate measures.

**Maintenance/User Serviceable Parts**

Routine maintenance to this openGear product is not required. This product contains no user serviceable parts. If the module does not appear to be working properly, please contact Technical Support using the numbers listed under the “Contact Us” section of this manual. All openGear products are covered by a generous 5-year warranty.
and will be repaired without charge for materials or labor within this period. See the “Warranty and Repair Policy” section in this manual for details.

Environmental Information

The equipment may contain hazardous substances that could impact health and the environment. To avoid the potential release of those substances into the environment and to diminish the need for the extraction of natural resources, Ross Video encourages you to use the appropriate take-back systems. These systems will reuse or recycle most of the materials from your end-of-life equipment in an environmentally friendly and health conscious manner.

The crossed-out wheeled bin symbol invites you to use these systems.

If you need more information on the collection, reuse, and recycling systems, please contact your local or regional waste administration. You can also contact Ross Video for more information on the environmental performances of our products.

In This Chapter

This chapter contains the following sections:

- Overview
- FDT-6604 Functional Block Diagrams
- User Interfaces
- Documentation Terms and Conventions

A Word of Thanks

Congratulations on choosing an openGear FDT-6604 Dual Channel Optical Transmitters. Thank you for joining the group of worldwide satisfied Ross Video customers!

Should you have a question pertaining to the installation or operation of your FDT-6604, please contact us at the numbers listed on the back cover of this manual. Our technical support staff is always available for consultation, training, or service.
Overview

The FDT-6604 series provides the ability to transport digital video baseband signals over a fiber optic link, allowing for longer transport distances. SDI outputs are reclocked providing excellent jitter and return loss specifications. This card also supports serial digital data rates from 270Mbps up to 2.98Gbps (1080p). LED indicators at the front of the card identify the presence of incoming video and the identified signal data rates for each channel independently.

The FDT-6604 series cards are fully hot swappable with all active components on the front removable module. No active components are installed on the rear module. This design greatly reduces down time eliminating any need for users to access the back of the rack frame.

The FDT-6604 series includes a serial digital SDI to fiber optic converter capable of equalizing and reclocking all common serial digital signals. Each channel of the card equalizes the incoming SDI signal, reclocks the signal with automatic rate detection for all popular data rates. Each channel is fully independent and can run at different data rates.

FDT-6604 Wavelengths

The FDT-6604 transmits at 1310nm on both channels and is targeted for point to point connections. For multiplexed optical connections or different wavelengths, select the appropriate part from the FDT-6604 CWDM Series.

FDT-6604 CWDM Series Wavelengths

The FDT-6604 is also available with Coarse Wavelength Division Multiplexing (CWDM) lasers. These models are identified with a two digit suffix as indicated in Table 1.1. The output wavelengths for each model are also indicated.

Features

The following features are standard for the FDT-6604 series:

- Supports a wide variety of standards (SD, HD, and 3G SDI)
- Conforms to SMPTE 424M, SMPTE 292M, and SMPTE 259M-C
- Supports single-mode fiber
- Hot-swappable from front of frame with no external connect/reconnect required
- **FDT-6604 only**: Optical output wavelength of 1310nm, Fabry-Perot (FP) Laser with -7 to -2dBm optical output power
- **FDT-6604 CWDM Series only**: Optical output wavelengths from 1270nm to 1610nm, Distributed Feedback (DFB) Laser with 0 to +3dBm optical output power
- Provides two SDI inputs, two fiber optic outputs, and four SDI outputs using a Full Rear Module (8320AR-044)
- LC/UPC optical connections
- Reclocking on all outputs at 270Mbps, 1.483Gbps, 1.485Gbps, 2.967Gbps, and 2.970Gbps
- Automatic detection of incoming data rate
- LED indicators for signal presence and data rate
- Reports status and configuration remotely via DashBoard
- Supports DataSafe
- Fits DFR-8321 series and OG3-FR series frames
- High density with 20 cards per frame in the openGear frames using Split Rear Modules (8320AR-045)
- Fully compliant with openGear specifications
- 5-year transferable warranty
FDT-6604 Functional Block Diagrams

This section provides a functional block diagrams that outlines the workflow of the FDT-6604.

**Figure 1.1 Simplified Block Diagram — 8320AR-044 Full Rear Module**

**Figure 1.2 Simplified Block Diagram — 8320AR-045 Split Rear Module (Single Card only)**
User Interfaces

The FDT-6604 series includes the following user interfaces.

DashBoard Control System

The DashBoard Control System enables you to monitor and control openGear frames and cards from a computer. DashBoard communicates with other cards in the openGear frame through the Network Controller Card. The DashBoard software and user manual are available on our website.

For More Information on...

• installing and using DashBoard, refer to the DashBoard User Manual.
• installing and configuring your Network Controller Card, refer to its user manual.
• the menus available in DashBoard for your card, refer to the chapter “DashBoard Menus” on page 4-1.

Card-edge Controls

The front-edge of the FDT-6604 series cards includes LEDs for monitoring the status of the input signals, reclocker operation, and general communication status. The card-edge also includes jumpers for setting the reclocker rate, setting the bypass mode, and card behavior during a loss of input.

For More Information on...

• the card-edge controls, refer to the section “Card Overview” on page 3-2.
• monitoring the card-edge LEDs, refer to the section “Control and Monitoring Features” on page 3-4.

SNMP Monitoring and Control

The Network Controller Card in the openGear frame provides optional support for remote monitoring of your frame and using the Simple Network Management Protocol (SNMP), which is compatible with many third-party monitoring and control tools.

For More Information on...

• SNMP controls on the card, refer to the FDT-6604 series Management Information Base (MIB) file.
• SNMP Monitoring and Control setup, refer to the MFC-8300 Series User Manual.
Documentation Terms and Conventions

The following terms and conventions are used throughout this manual.

Terms

The following terms are used:

- "Board" and "Card" refer to openGear terminal devices within openGear frames, including all components and switches.
- "DashBoard" refers to the DashBoard Control System.
- "DFR-8321 series frame" refers to all versions of the DFR-8321 series frames and any available options unless otherwise noted.
- "FDT-6604" refers to the card version that does not include the Coarse Wavelength Division Multiplexing (CWDM) lasers.
- "FDT-6604 series" refers to all versions of the card and any available options unless otherwise noted.
- "OP3-FR series frame" refers to all versions of the OG3-FR series frames and any available options unless otherwise noted.
- "openGear frame" refers to the DFR-8321 series and the OG3-FR series frames that house the cards.
- "Operator" and "User" refer to the person who uses the card.
- "System" and "Video system" refer to the mix of interconnected production and terminal equipment in your environment.

Conventions

The following conventions are used:

- The "Operating Tips" and "Note" boxes are used to provide additional user information.
Installation

In This Chapter

This chapter provides instructions for installing the rear module(s) for the FDT-6604 series, installing a card into the frame, cabling details, and updating the software.

The following topics are discussed:

- Before You Begin
- Installing the FDT-6604 Series
- FDT-6604 Cabling
- FDT-6604-27 Cabling
- FDT-6604-31 Cabling
- FDT-6604-35 Cabling
- FDT-6604-43 Cabling
- FDT-6604-47 Cabling
- FDT-6604-51 Cabling
- FDT-6604-55 Cabling
- FDT-6604-59 Cabling
- Software Upgrades
Before You Begin

Before proceeding with the instructions in this chapter, ensure that your openGear frame is properly installed according to the instructions in its manual.

Static Discharge

Throughout this chapter, please heed the following cautionary note:

**ESD Susceptibility** — Static discharge can cause serious damage to sensitive semiconductor devices. Avoid handling circuit boards in high static environments such as carpeted areas and when synthetic fiber clothing is worn. Always exercise proper grounding precautions when working on circuit boards and related equipment.

Unpacking

Unpack each card you received from the shipping container and ensure that all items are included. If any items are missing or damaged, contact your sales representative or Ross Video directly.

Working with Fiber Optic Connectors

Keep the following in mind when working with fiber optic connectors:

- Every time you are required to insert a connector into a device or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors.
- Connectors must always be inserted into a device or have a dust cap on. Refer to Figure 2.1 for dust cap locations.
- A poor optical connection is often similar to a poor electrical connection. Try removing the connector, cleaning, and re-inserting the connector. A bad connection can result in experiencing instability of signal, high loss, or a noisy signal.

![Card Connectors with Dust Caps Installed — 8320AR-044 Rear Module Shown](image)

*Figure 2.1 Card Connectors with Dust Caps Installed — 8320AR-044 Rear Module Shown*
Installing the FDT-6604 Series

This section outlines how to install a rear module and card in an openGear frame. The specific rear module you need to install depends on your application.

Caution — Never attempt to look down the barrel of a connected fiber or device transmitting an optical signal. The transmitted light is not in the visible spectrum and may cause permanent eye damage. Turn off all laser sources before disconnecting devices.

Supported Rear Modules

The 8320AR-044 Full Rear Module or the 8320AR-045 Split Rear Module can be used. Note that the available cable designations differ between the type of module used.

The FDT-6604 CWDM Series use the same rear modules as the FDT-6604, but require a different cabling scheme. The wavelength of the optical outputs of your card is dependent on the card model.

Installing a Rear Module

If the rear module is already installed, proceed to the section “Installing a Card” on page 2-4.

To install a rear module in your openGear frame

1. Locate the card frame slots on the rear of the frame.
2. Remove the Blank Plate from the slot you have chosen for the installation.
3. Remove the dust caps from the Fiber ports on the rear module that faces the interior of the frame. Refer to Figure 2.1 and Figure 2.2 for dust cap locations.

4. Install the bottom of the rear module in the Module Seating Slot at the base of the frame’s back plane.
5. Align the top hole of the rear module with the screw on the top-edge of the frame back plane.
6. Using a Phillips screwdriver and the supplied screw, fasten the rear module to the back plane of the frame. Do not over tighten.
7. Ensure proper frame cooling and ventilation by having all rear frame slots covered with rear modules or Blank Plates.

Installing a Card

Use the following procedure to install a card in an openGear frame:

1. Locate the rear module you installed in the procedure “Installing a Rear Module”.

2. Ensure that the rear module is one of the required rear modules for the card. You must use either a Full Rear Module (8320AR-044) or a Split Rear Module (8320AR-045).

3. Remove the dust caps from the **Fiber 1** and **Fiber 2** port connectors on the card end.
   - Refer to Figure 2.3 for connector location.
   - Before handling fiber optic components, refer to the Important Regulatory and Safety Notices document that shipped with your card.

4. Ensure that the exposed surface of the ceramic ferrule of the connectors is clean. Refer to the section “Working with Fiber Optic Connectors” on page 2-2 for cleaning tips.

5. Hold the card by the edges and carefully align the card-edges with the slots in the frame.

6. Fully insert the card into the frame until the rear connection plus is properly seated in the rear module. You will feel a click when the card mates onto the rear module.

7. Remove the dust cap from the **Fiber 1** port (the topmost fiber optic port) on the rear module that faces the exterior of the frame. This is the port that you will insert your **Fiber A** optic cable into.

8. Remove the dust cap from the **Fiber 2** port (the bottom fiber optic port) on the rear module that faces the exterior of the frame. This is the port that you will insert your **Fiber B** optic cable into.

9. Ensure the ceramic ferrule of each connector is clean.
FDT-6604 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

**Caution** — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

### 8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to **Figure 2.3**.

![Figure 2.3 FDT-6604 — 8320AR-044 Cabling](image)

### 8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to **Figure 2.4**.

![Figure 2.4 FDT-6604 — 8320AR-045 Cabling](image)
FDT-6604-27 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-27. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

Caution — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to Figure 2.5.

![Figure 2.5 FDT-6604-27 — 8320AR-044 Cabling](image)

8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to Figure 2.6.

![Figure 2.6 FDT-6604-27 — 8320AR-045 Cabling](image)
FDT-6604-31 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-31. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

**Caution** — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

### 8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to **Figure 2.7**.

![Figure 2.7 FDT-6604-31 — 8320AR-044 Cabling](image)

### 8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to **Figure 2.8**.

![Figure 2.8 FDT-6604-31 — 8320AR-045 Cabling](image)
FDT-6604-35 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-35. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

**Caution** — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

### 8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to Figure 2.9.

![Figure 2.9 FDT-6604-35 — 8320AR-044 Cabling](image)

### 8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to Figure 2.10.

![Figure 2.10 FDT-6604-35 — 8320AR-045 Cabling](image)
FDT-6604-43 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-43. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

**Caution** — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

**8320AR-044 Full Rear Module**

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to Figure 2.11.

![Figure 2.11 FDT-6604-43 — 8320AR-044 Cabling](image)

**8320AR-045 Split Rear Module**

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to Figure 2.12.

![Figure 2.12 FDT-6604-43 — 8320AR-045 Cabling](image)
FDT-6604-47 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-47. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

Caution — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to Figure 2.13.

8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to Figure 2.14.
FDT-6604-51 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-51. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

Caution — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to Figure 2.15.

![Figure 2.15 FDT-6604-51 — 8320AR-044 Cabling](image)

8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to Figure 2.16.

![Figure 2.16 FDT-6604-51 — 8320AR-045 Cabling](image)
FDT-6604-55 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-55. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

Caution — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility’s practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to Figure 2.17.

![Figure 2.17 FDT-6604-55 — 8320AR-044 Cabling](image)

8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to Figure 2.18.

![Figure 2.18 FDT-6604-55 — 8320AR-045 Cabling](image)
FDT-6604-59 Cabling

This section provides information for connecting cables to the installed rear modules on the openGear frame for the FDT-6604-59. The optical connector used to mate the card to the rear module is designed for blind mate optical connections. All fiber interfaces are single mode fibers.

Caution — Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.

8320AR-044 Full Rear Module

Each rear module occupies two slots and accommodates one card. This rear module provides two optical outputs, two SDI inputs, and four SDI outputs. Refer to Figure 2.9.

![Figure 2.9 FDT-6604-59 — 8320AR-044 Cabling](image)

8320AR-045 Split Rear Module

Each rear module occupies two slots and accommodates two cards. This rear module provides two optical outputs, two SDI inputs, and one SDI output per card. Refer to Figure 2.10.

![Figure 2.10 FDT-6604-59 — 8320AR-045 Cabling](image)
Software Upgrades

This section provides instructions for installing a license key and upgrading the software for your FDT-6604 series using DashBoard.

**Note** — *This procedure assumes that you are running DashBoard version 3.0.0 or higher.*

To upgrade the software on a card

2. Display the **Device View** of the card by double-clicking its status indicator in the **Basic Tree View**.
3. From the **Device View**, click **Upload** to display the **Select file for upload** dialog.
4. Navigate to the ***.bin** upload file you wish to upload.
5. Click **Open**.
6. If you are upgrading a single card, click **Finish** to start the upgrade. Proceed to step 8.
7. If you are upgrading multiple cards:
   - Click **Next >** to display the **Select Destination** menu. This menu provides a list of the compatible cards based on the card selected in step 2.
   - Specify the card(s) to upload the file to by selecting the check box(es) for the cards you wish to upload the file to.
   - Verify that the card(s) you wish to upload the file to. The **Error/Warning** fields indicate any errors, such as incompatible software or card type mismatch.
   - Click **Finish**.
8. Monitor the upgrade.
   - The **Upload Status** dialog enables you to monitor the upgrade process.
   - The card reboots automatically once the file is uploaded. The card is temporarily taken off-line.
   - The reboot process is complete once the status indicators for the **Card State** and **Connection** return to their previous status.

**Operating Tip** — *If you are running DashBoard version 2.3 or lower, you must click **Reboot** in the **Device** tab to complete the upgrade process.*
UserControls

In This Chapter

This chapter provides a general overview of the user controls available on the FDT-6604 series. The following topics are discussed:

- Card Overview
- Control and Monitoring Features
Card Overview

This section provides a general overview of the FDT-6604 series components. For information on the LEDs available on the card-edge, refer to the section “Control and Monitoring Features” on page 3-4.

Figure 3.1 FDT-6604 Series — Components

1) Rx Power LEDs - Channel A
2) Card Control (JP1)
3) Loss of Signal - Channel A (JP2)
4) Bypass EQ Mode - Channel A (JP3)
5) Select Switch - Channel A (SW1)
6) Rx Power LEDs - Channel B
7) Loss of Signal - Channel B (JP4)
8) Bypass EQ Mode - Channel B (JP5)
9) Select Switch - Channel B (SW2)
10) Bootload Button (SW3)
11) Fiber Optic Connector

1. Rx Power LEDs - Channel A

These LEDs are not implemented.

2. Card Control (JP1)

Use JP1 to select whether the card is remotely configured (for example, via DashBoard or SNMP). Select one of the following options:

- REMOTE — This option enables the remote configuration. All parameters may be configured remotely. Data rate selection can also be configured locally using SW1, however, the jumper settings are ignored. Refer to the chapter “DashBoard Menus” on page 4-1 for information on the available DashBoard menus.
- LOCAL — This option disables the remote configuration. The card can only be configured using the card-edge controls. This option is useful to lock out remote configuration changes. This is the default setting.

Note — The card status and configuration can still be monitored remotely when JP1 is set to LOCAL.

3. Loss of Signal - Channel A (JP2)

Use JP2 to determine the card behavior on a loss of input on Channel A. Note that the JP2 setting is only used when JP1 is set to LOCAL. Select one of the following options:

- MUTE — This option mutes the card outputs when the input equalizer is unable to detect a valid input signal, or when the reclocker is unable to lock to the input.
- NO MUTE — This option does not mute the card outputs on loss of input or lock. This is the default setting.
4. **Bypass EQ Mode - Channel A (JP3)**

Use JP3 to determine the equalizer behavior when the Reclocker Rate is set to **BYPASS** (using SW1) for Channel A. Note that the JP3 setting is only used when JP1 is set to **LOCAL**. Select one of the following:

- **EQ** — This option enables the input cable equalizer.
- **NO EQ** — This option disables the equalizer when the Reclocker Rate is set to **BYPASS**.
  
  This option allows the card to pass signals that are outside the response band of the equalizer reclocking, such as 143MHz. This is useful for non-SMPTE data rates.

5. **Select Switch - Channel A (SW1)**

Use SW1 to set the reclocking rate of the card for Channel A. Pressing SW1 cycles through the following options:

- **AUTO** — This option enables automatic rate detection on the card. It will automatically lock to input at any supported data rate (270Mbps, 1.5Gbps, or 3Gbps).
- **BYPASS** — This option enables the card to pass any data rate without reclocking. The output is set to the HD slew rate except when the input is a valid SD data rate (270Mbps).
- **270M** — This option configures the card to reclock at a rate of 270Mbps (SD).
- **1.5G** — This configures the card to reclock at a rate of 1.5Gbps (HD).
- **3G** — This configures the card to reclock at a rate of 3Gbps (HD).

6. **Rx Power LEDs - Channel B**

These LEDs are not implemented.

7. **Loss of Signal - Channel B (JP4)**

Use JP4 to determine the card behavior on a loss of input on Channel B. Same options as for Channel A.

8. **Bypass EQ Mode - Channel B (JP5)**

Use JP5 to determine the card behavior on a loss of input on Channel B. Note that the JP5 setting is only used when JP1 is set to **LOCAL**. Same options as for Channel A.

9. **Select Switch - Channel B (SW2)**

Use SW2 to set the reclocking rate of the card for Channel B. Same options as for Channel A.

10. **Bootload Button (SW3)**

JP3 is used for factory service in the unlikely event of a complete card failure. The Bootload process is further described in the section “**Bootload Button**” on page 6-2.

11. **Fiber Optic Connector**

The FDT-6604 series use a blind mate LC/UPC connector to interface with the Rear Modules (8320AR-044 and 8320AR-045). The rear module remains passive, while allowing for the card to be replaced without the need to remove any connected BNC or fiber optic cables. The blind mate connector is connected to the optical module via a single mode LC/UPC pigtail.

The fiber optic connector for the card includes a dust cap. The dust cap must stay on at all times when the card is not installed in a frame. Ensure to keep the fibers end face clean and use the caps to protect the fiber from scratches and collecting dust. Refer to the **Important Regulatory and Safety Notices** document that shipped with your card for safety information.
Control and Monitoring Features

This section provides information on the LEDs located on the card-edge. Refer to Figure 3.2 for the location of the LEDs.

Status LEDs on the FDT-6604 Series

The front-edge of the card has LED indicators for alarms, and communication activity. Basic LED displays and descriptions are provided in Table 3.1.

Table 3.1 LEDs on the FDT-6604 Series

<table>
<thead>
<tr>
<th>LED</th>
<th>Color</th>
<th>Display and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PWR</td>
<td>Green</td>
<td>When lit green, this LED indicates that the card is functioning normal and that no anomalies have been detected.</td>
</tr>
<tr>
<td></td>
<td>Flashing Green</td>
<td>When flashing green, this LED indicates that the bootloader is currently running.</td>
</tr>
<tr>
<td></td>
<td>Yellow</td>
<td>When lit yellow, this LED indicates that the CPU is booting.</td>
</tr>
<tr>
<td></td>
<td>Red</td>
<td>When lit red, this LED indicates that the card is powering on or there is a fault condition.</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>When unlit, this LED indicates a lack of power to the card.</td>
</tr>
</tbody>
</table>
### Table 3.1 LEDs on the FDT-6604 Series

<table>
<thead>
<tr>
<th>LED</th>
<th>Color</th>
<th>Display and Description</th>

DashBoard Menus

In This Chapter

This section briefly summarizes the menus, items, and parameters available from the DashBoard Control System for the FDT-6604 series. This chapter provides a summary of the menus available for the FDT-6604 series. Default values are indicated with an asterisk (*).

The following topics are discussed:

- Status Tabs
- Setup Tab
- Alarms Tab

Operating Tip — Wait 30 seconds after the last setting change to ensure all changes are saved to the non-volatile memory of the card.
Status Tabs

This section summarizes the Status tab parameters available in DashBoard. The fields in the Status tabs vary in severity from green (valid), yellow (caution), to red (alarm). DashBoard reports the most severe alarm for a single field. Alarm colors are noted within the tables as text set in brackets next to the menu parameter name.

Signal Tab

Table 4.1 summarizes the read-only information displayed in the Signal tab.

- Troubleshooting Checklist
- Warranty and Repair Policy
Troubleshooting Checklist

Routine maintenance to this openGear product is not required. In the event of problems with your FDT-6604 series card, the following basic troubleshooting checklist may help identify the source of the problem. If the frame still does not appear to be working properly after checking all possible causes, please contact your openGear products distributor, or the Technical Support department at the numbers listed under the “Contact Us” section.

1. **Visual Review** — Performing a quick visual check may reveal many problems, such as connectors not properly seated or loose cables. Check the card, the frame, and any associated peripheral equipment for signs of trouble.

2. **Power Check** — Verify the power indicator LED on the distribution frame front panel for the presence of power. If the power LED is not illuminated, verify that the power cable is connected to a power source and that power is available at the power main. Confirm that the power supplies are fully seated in their slots. If the power LED is still not illuminated, replace the power supply with one that is verified to work.

3. **Input Signal Status** — Verify that source equipment is operating correctly and that a valid signal is being supplied.

4. **Output Signal Path** — Verify that destination equipment is operating correctly and receiving a valid signal.

5. **Unit Exchange** — Exchanging a suspect unit with a unit that is known to be working correctly is an efficient method for localizing problems to individual units.

---

**Caution** — *Every time you are required to insert a connector into a device, or mating sleeve, you must clean the connector. All exposed surfaces of the ceramic ferrule must be clean. Follow your facility practices of cleaning fiber optic connectors. Connectors must always be inserted into a device or have a dust cap on.*

---

**Bootload Button**

In the unlikely event of a complete card failure, you may be instructed by a Ross Technical Support specialist to perform a complete software reload on the card.

**To reload the software on a card**

1. Eject the card from the frame.

2. Press and hold the **Bootload** button, while re-inserting the card into the frame.

3. Release the button.
   - The **PWR** LED flashes green while the card is waiting for a new software load.
   - If a new software load is not sent to the card within 60 seconds, the card will attempt to restart with its last operational software load.
   - Software loads can be sent to the card via the ethernet connection on the rear of the frame.
Warranty and Repair Policy

The FDT-6604 series card is warranted to be free of any defect with respect to performance, quality, reliability, and workmanship for a period of FIVE (5) years from the date of shipment from our factory. In the event that your FDT-6604 series card proves to be defective in any way during this warranty period, Ross Video Limited reserves the right to repair or replace this piece of equipment with a unit of equal or superior performance characteristics.

Should you find that the FDT-6604 series card has failed after your warranty period has expired, we will repair your defective product should suitable replacement components be available. You, the owner, will bear any labor and/or part costs incurred in the repair or refurbishment of said equipment beyond the FIVE (5) year warranty period.

In no event shall Ross Video Limited be liable for direct, indirect, special, incidental, or consequential damages (including loss of profits) incurred by the use of this product. Implied warranties are expressly limited to the duration of this warranty.

This FDT-6604 Series User Manual provides all pertinent information for the safe installation and operation of your openGear Product. Ross Video policy dictates that all repairs to the FDT-6604 series card are to be conducted only by an authorized Ross Video Limited factory representative. Therefore, any unauthorized attempt to repair this product, by anyone other than an authorized Ross Video Limited factory representative, will automatically void the warranty. Please contact Ross Video Technical Support for more information.

In Case of Problems

Should any problem arise with your FDT-6604 series card, please contact the Ross Video Technical Support Department. (Contact information is supplied at the end of this publication.)

A Return Material Authorization number (RMA) will be issued to you, as well as specific shipping instructions, should you wish our factory to repair your FDT-6604 series card. If required, a temporary replacement frame will be made available at a nominal charge. Any shipping costs incurred will be the responsibility of you, the customer. All products shipped to you from Ross Video Limited will be shipped collect.

The Ross Video Technical Support Department will continue to provide advice on any product manufactured by Ross Video Limited, beyond the warranty period without charge, for the life of the equipment.
