Important Regulatory and Safety Notices

Before using this product and any associated equipment, refer to the “Important Safety Instructions” listed below so as to avoid personnel injury and to prevent product damage.

Products may require specific equipment, and /or installation procedures be carried out to satisfy certain regulatory compliance requirements. Notices have been included in this publication to call attention to these Specific requirements.

Symbol Meanings

This symbol on the equipment refers you to important operating and maintenance (servicing) instructions within the Product Manual Documentation. Failure to heed this information may present a major risk of damage or injury to persons or equipment.

The symbol with the word “Warning” within the equipment manual indicates a potentially hazardous situation, which if not avoided, could result in death or serious injury.

The symbol with the word “Caution” within the equipment manual indicates a potentially hazardous situation, which if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

The symbol with the word “Notice” within the equipment manual indicates a situation, which if not avoided, may result in major or minor equipment damage or a situation which could place the equipment in a non-compliant operating state.

This symbol is used to alert the user that an electrical or electronic device or assembly is susceptible to damage from an ESD event.

Important Safety Instructions

This product is intended to be a component product of the RossGear 8000 series frame. Refer to the RossGear 8000 series frame User Manual for important safety instructions regarding the proper installation and safe operation of the frame as well as it’s component products.

Certain parts of this equipment namely the power supply area still present a safety hazard, with the power switch in the OFF position. To avoid electrical shock, disconnect all A/C power cords from the chassis’ rear appliance connectors before servicing this area.

Service barriers within this product are intended to protect the operator and service personnel from hazardous voltages. For continued safety, replace all barriers after any servicing.

This product contains safety critical parts, which if incorrectly replaced may present a risk of fire or electrical shock. Components contained within the product’s power supplies and power supply area, are not intended to be customer serviced and should be returned to the factory for repair.

To reduce the risk of fire, replacement fuses must be the same type and rating. Only use attachments/accessories specified by the manufacturer.
EMC Notices

US FCC Part 15

This equipment has been tested and found to comply with the limits for a class A Digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case users will be required to correct the interference at their own expense.

Notice

Changes or modifications to this equipment not expressly approved by Ross Video Ltd. could void the user’s authority to operate this equipment.

CANADA

This Class “A” digital apparatus complies with Canadian ICES-003.
Cet appareil numerique de classe “A” est conforme à la norme NMB-003 du Canada.

EUROPE

This equipment is in compliance with the essential requirements and other relevant provisions of CE Directive 93/68/EEC.

INTERNATIONAL

This equipment has been tested to CISPR 22:1997 along with amendments A1:2000 and A2:2002 and found to comply with the limits for a Class A Digital device.

Notice

This is a Class A product. In domestic environments this product may cause radio interference in which case the user may have to take adequate measures.

Maintenance/User Serviceable Parts

Routine maintenance to this RossGear product is not required. This product contains no user serviceable parts. If the module does not appear to be working properly, please contact Technical Support using the numbers listed under the “Contact Us” section on the last page of this manual. All RossGear products are covered by a generous 5-year warranty and will be repaired without charge for materials or labor within this period. See the “Warranty and Repair Policy” section in this manual for details.
Environmental Information

The equipment that you purchased required the extraction and use of natural resources for its production. It may contain hazardous substances that could impact health and the environment.

To avoid the potential release of those substances into the environment and to diminish the need for the extraction of natural resources, Ross Video encourages you to use the appropriate take-back systems. These systems will reuse or recycle most of the materials from your end-of-life equipment in an environmentally friendly and health conscious manner.

The crossed-out wheeled bin symbol invites you to use these systems.

If you need more information on the collection, reuse, and recycling systems, please contact your local or regional waste administration.

You can also contact Ross Video for more information on the environmental performances of our products.
Introduction

- Functional Block Diagram
- Features
- Documentation Terms

A Word of Thanks

Congratulations on choosing the Ross Video VEA-7001A Precision Video Equalizing Amplifier with Clamping. The VEA-7001A is part of a full line of Analog Products within the RossGear Terminal Equipment family of analog and digital products, backed by Ross Video’s experience in engineering and design expertise since 1974.

You will be pleased at how easily your new VEA-7001A fits into your overall working environment. Equally pleasing is the product quality, reliability and functionality. Thank you for joining the worldwide group of satisfied Ross Video customers!

Should you have a question pertaining to the installation and operation of your VEA-7001A, please contact us at the numbers listed on the back page of this publication. Our technical support staff is always available for consultation, training, or service.
Overview

The unique RossGear VEA-7001A Precision Video Equalizing Amplifier with Clamping precisely and easily equalizes your choice of three popular coaxial cable types: Belden 8281, 1694, or 1505. This 3-cable type selection ability is achieved to a level of accuracy never before obtained in a single amplifier. All other amplifiers on the market are designed primarily for one type of cable and usually achieve mediocre results with other cable types, or require complex and time-consuming adjustment procedures.

During installation, the setting of a single adjustment is all that is needed to obtain unparalleled equalization accuracy, thanks to very accurate factory-calibration. The need to use elaborate frequency response measuring equipment in the field is eliminated. Surface Mount Technology has been used in the manufacture of this card to further eliminate the need for field adjustments.

Back porch clamping is provided to assist in the removal of hum or other signal disturbances. Two clamping speeds are jumper selectable. A differential input gives excellent ground loop rejection. The amplifier input may be AC or DC coupled.

Temperature drift effects are almost non-existent due to the use of the latest in analog ASIC’s combined with meticulous product engineering.

The VEA-7001A card is designed for use in the RossGear 7200 series video, and 7850 series A/V distribution frames. The power to each card is individually fused to prevent failure of any one card from affecting the rest of the cards in the frame. RossGear analog (and digital) cards are also designed to fit into distribution frames of some other manufacturers for installation flexibility.

Ross Video Limited is pleased to offer the flexibility of selectable three-cable type precision equalization within a single card slot. The VEA-7001A fills a unique role within the full line of RossGear video distribution products, engineered to satisfy the highest quality broadcast standards and the most demanding requirements of your facility.

Functional Block Diagram

![Functional Block Diagram of VEA-7001A Functions](image)

*Figure 1. Simplified Block Diagram of VEA-7001A Functions*
Features
The following features are unique to the VEA-7001A Precision Video Equalizing Amplifier with Clamping:

- Precision equalization of three selectable coaxial cable types up to 1,000 ft. (305m)
- Easy single-control equalization for fast installation
- AC or DC input coupling
- Eight outputs
- Back porch clamping
- Clamping speed jumper selectable
- Delay matched for precise interchangeability
- Delay adjustable if required for system timing
- Superb stability of frequency response and color timing
- Differential input for outstanding ground loop hum rejection
- Excellent isolation between outputs
- Power to each card is individually fused
- 5-year transferable warranty

Documentation Terms
The following terms are used throughout this guide:

- “Frame” refers to the VFR-7214, VFR-7210, AVFR-7854C, and AVFR-7855C frames that can house the VEA-7001A cards. See the respective User Manuals for details.
- “Operator” and “User” both refer to the person who uses the VEA-7001A cards.
- “Board”, “Card”, and “Module” all refer to the VEA-7001A cards, including all components.
- “System” refers to the mix of interconnected analog production and terminal equipment in which the VEA-7001A cards operate.
Installation and Setup

In This Chapter

This chapter contains the following information sections:

- Static Discharge
- Unpacking
- Jumper Settings
- Board Installation
- Cable Connections
- Module Adjustment

Static Discharge

Whenever handling the VEA-7001A cards and other related equipment, please observe all static discharge precautions as described in the following note:

Static discharge can cause serious damage to sensitive semiconductor devices. Avoid handling circuit boards in high static environments such as carpeted areas, and when wearing synthetic fiber clothing. Always exercise proper grounding precautions when working on circuit boards and related equipment.

Unpacking

Unpack each VEA-7001A card you received from the shipping container, and check the contents against the packing list to ensure that all items are included. If any items are missing or damaged, contact your sales representative or Ross Video directly.
Jumper Settings

Use the following figure, card labeling, and discussions to set up VEA-7001A jumpers.

**Input Coupling**

Set jumpers JP1 and JP2 to determine input AC or DC voltage coupling. The two jumpers must both be positioned on their AC or DC pin settings. The criteria for setting the coupling jumpers is as follows:

- **AC**: Use this setting if the back porch of the input signal is displaced from ground level by more than ±0.5 Volts DC.

- **DC**: With this setting, the entire amplifier becomes DC coupled. Default setting.

**Back Porch Clamping**

Set jumper JP4 to enable or disable back porch clamping.

- **ON**: Back porch clamping is active. Default setting.

- **OFF**: Clamping is disabled. Use this setting for any signals not having sync pulses; for example, non-composite or component signals.

**Clamping Speed**

If jumper JP4 is set to ON position, set jumper JP3 to configure clamping speed as follows:

- **NORMAL**: This setting is used for normal back porch clamping to set the DC level of the back porch to ground level. Use this setting unless there is a definite reason to use the FAST setting.

- **FAST**: This setting is used for fast back porch clamping. Use this setting for any signals which require clamping in less than 22 lines. This mode may be useful if the input signal is hard switched between two video signals with different DC offsets.
**Cable Type Selection**

Set jumpers JP6 and JP7 to allow the operator to select the input cable type being equalized. The two jumpers must *both* be positioned at only one of the selections: (Belden) 8281, 1694, or 1505. For other cable-types, choose the closest matching cable type from these three selections.

**Board Installation**

Use the following steps to install the VEA-7001A cards in a RossGear 7200 series video, or 7850 series A/V distribution frame:

1. Refer to the User Manual of the RossGear frame to ensure that the frame is properly installed according to instructions. If this module is to be installed in any compatible frame other than a Ross Video product, refer to the frame manufacturer’s manual for specific instructions.

2. Please note that heat and power distribution requirements within a frame may dictate specific slot placement of cards. Cards with many heat-producing components should be arranged to avoid areas of excess heat build-up, particularly in frames using convectional cooling.

3. After selecting the desired frame installation slot, hold the VEA-7001A card by the edges and carefully align the card edges with the slots in the frame. Then fully insert the card into the frame until the rear connection plug is properly seated.

**Cable Connections**

The following diagram provides instruction for connecting input and output coax cables to the VEA-7001A when mounted in RossGear 7200 series Video, and 7850 series A/V distribution frames.

It is recommended that all unused outputs be terminated. The specifications in this manual are based on all outputs being terminated.

![Cabling Designations for RossGear 7200 and 7850 Series Frames](image)
Module Adjustment

Use the following figure, card labeling, and discussions to set up VEA-7001A performance characteristics.

![Module Adjustment](image)

Figure 4. VEA-7001A Module Adjustments

**Gain and Equalization**

To adjust gain and equalization, set RV7 (gain) and RV8 (equalization) as required for your system and cable length. Use any suitable test signal that would enable the signal gain and subcarrier level to be correctly set (e.g. pulse and bar or color bar). A sweep signal can be used, but is not normally necessary.

**Delay**

The CV1 delay adjustment is factory-set to ensure that the path length of every VEA-7001A is precisely matched. The 7001A is factory-calibrated to have a delay of 24.0ns. This allows for maximum interchangeability of VEA-7001A cards without affecting system timing. Changing from the factory setting will make this card non-interchangeable due to differences in delay. However, if desired, and interchangeability is not important, the timing adjustment CV1 may be used to resolve minor system timing problems.
# Specifications

Service Information

In This Chapter

This chapter contains the following sections:

- Troubleshooting Checklist
- Warranty and Repair Policy

Troubleshooting Checklist

Routine maintenance to this RossGear product is not required. In the event of problems with your VEA-7001A, the following basic troubleshooting checklist may help identify the source of the problem. If the module still does not appear to be working properly after checking all possible causes, please contact your Ross Video products distributor, or the Ross Video Technical Support department at the numbers listed under the “Contact Us” section at the end of this manual. Ross Video Ltd. is committed to providing a superior customer experience; please contact us with any questions you may have about your VEA-7001A.

1. **Visual Review** – Performing a quick visual check may reveal many problems, such as connectors not properly seated or loose cables. Check the module, the frame, and any associated peripheral equipment for signs of trouble.

2. **Power Check** – Check the power indicator LED on the distribution frame front panel for the presence of power. If the power LED is not illuminated, verify that the power cable is connected to a power source and that power is available at the power main. Confirm that the power supplies are fully seated in their slots. If the power LED is still not illuminated, replace the power supply with one that is verified to work.

3. **Reseat the Card in the Frame**.

4. **Check Control Settings** – Refer to the Installation and Operation sections of the manual and verify all user-components.

5. **Input Signal Status** – Verify that source equipment is operating correctly and that a valid signal is being supplied.

6. **Output Signal Path** – Verify that destination equipment is operating correctly and receiving a valid signal.

7. **Module Exchange** – Exchanging a suspect module with a module that is known to be working correctly is an efficient method for localizing problems to individual modules.
Warranty and Repair Policy

The RossGear VEA-7001A is warranted to be free of any defect with respect to performance, quality, reliability, and workmanship for a period of FIVE (5) years from the date of shipment from our factory. In the event that your RossGear VEA-7001A proves to be defective in any way during this warranty period, Ross Video Limited reserves the right to repair or replace this piece of equipment with a unit of equal or superior performance characteristics.

Should you find that this RossGear VEA-7001A has failed after your warranty period has expired, we will repair your defective product for as long as suitable replacement components are available. You, the owner, will bear any labor and/or component costs incurred in the repair or refurbishment of said equipment beyond the FIVE (5) year warranty period.

In no event shall Ross Video Limited be liable for direct, indirect, special, incidental, or consequential damages (including loss of profits) incurred by the use of this product. Implied warranties are expressly limited to the duration of this warranty.

This RossGear VEA-7001A Precision Video Equalizing Amplifier with Clamping User Manual of our Analog Video Products line provides all pertinent information for the safe installation and operation of your RossGear Product. Ross Video policy dictates that all repairs to the RossGear VEA-7001A are to be conducted only by an authorized Ross Video Limited factory representative. Therefore, any unauthorized attempt to repair this product, by anyone other than an authorized Ross Video Limited factory representative, will automatically void the warranty. Please contact Ross Video Technical Support for more information.

In Case of Problems

Should any problem arise with your RossGear VEA-7001A, please contact the Ross Video Technical Support Department. (Contact information is supplied at the end of this publication.)

A Return Material Authorization number (RMA) will be issued to you, as well as specific shipping instructions, should you wish our factory to repair your RossGear VEA-7001A. A temporary replacement module, if required, will be made available at a nominal charge. Any shipping costs incurred, will be the responsibility of you, the customer. All products shipped to you from Ross Video Limited, will be shipped collect.

The Ross Video Technical Support department will continue to provide advice on any product manufactured by Ross Video Limited, beyond the warranty period without charge, for the life of this equipment.
Ordering Information

In This Chapter

This chapter contains ordering information for the VEA-7001A and related products.

**VEA-7001A Video DA and Related Products**

**Standard Equipment**
- VEA-7001A Precision Video Equalizing Amplifier with Clamping

**Optional Equipment**
- 7001AD-004 Precision Video Equalizing Amplifier with Clamping User Manual (additional User Manual)
- VFR-7214 Video Products Frame and Power Supply (PS-7103) (1 RU, holds 4 modules, includes 1 power supply)
- VFR-7210 Video Products Frame and Power Supply (PS-7103) (2 RU, holds 10 modules, includes 1 power supply)
- AVFR-7854C Analog Products Frame and Power Supply (PS-7103) (1RU, holds 2 audio and 2 video modules, includes 1 power supply)
- AVFR-7855C Analog Products Frame and Power Supply (PS-7103) 2RU, holds 5 audio and 5 video modules, includes 1 power supply)
- PS-7103 Power Supply (85-250 Volts)
- EXT-7200 Extender Board (module servicing extension)
- FSB-7110 Frame Support Bracket (module servicing extension)

Your **VEA-7001A Video Equalizing Amplifier** is part of the RossGear family of products. Ross Video Limited offers a full line of RossGear terminal equipment including distribution, conversion, monitoring, synchronizers, encoders, decoders, AES, keyers, control switchers, as well as analog audio and video products.
