

Ports and Connectors

Notes:

- Only the Reference BNC (Ref In) on the left (Ch A-D) card is operational when more than one card is installed.
- The AES Digital Audio I/O ports require the TASCAM AES DIGITAL DB25 Breakout Cable option (not supplied with system).
- The number of SDI inputs and outputs depends on the model of server you have.
- If you are recording from, or playing into, an external device you must have all devices connected to the same reference signal to ensure proper audio/video synchronization.
- A breakout cable connects to the Serial port and provides 8 RJ45 serial connectors.
- Both RS-422 serial and ethernet control are supported for remote control.
- The TC In (LINE IN) audio port is used for TC Chase.

Power, Video, Audio and Control Cabling

Note: The number of Video I/O cards in your server depends on the options installed. Every video channel features an SDI input and SDI output; and every channel can be used as a recorder or player.

Note: An octal breakout cable is supplied with the server and provides 8 RJ45 male connectors for serial control over the first 8 channel transports. RJ45 to D9 adapters are also provided.

Note: It is recommended that you always connect the AC Power Adapter to the device before connecting to Mains Power.
