VIDEO PRODUCTION ASSET MANAGEMENT

Streamline Production is designed to bridge the gap between the newsroom computer system (NRCS) and playout server.

Features/Benefits

- Use customizable metadata fields to search for an existing clip or create a placeholder.
- Use the MOS plugin to browse available clips and watch proxy previews in the NRCS.
- Automatically index files from multiple locations or from devices like the Tria News to make them searchable in Streamline. Content can be ingested, copied or moved based on rules.

IBC Highlights

BROWSING ASSETS & CREATING PLACEHOLDERS

Users can browse assets or create placeholders inside the newsroom computer system (NRCS) using the HTML5 MOS plugin.

CONTROL PLAYOUT OF CLIPS

Clips added to a rundown will be sent to the appropriate playout device and a playlist will be created and updated as changes are made.

FLEXIBLE ARCHITECTURE

From Streamline.cloud to Streamline Enterprise, there are a variety of feature sets and pricing models to fit any size production.
