IP & SDP WORKFLOWS

XPression is the most flexible real-time motion graphics design and playout platform in the industry today. It has become the first choice of graphic designers and operators around the world.

Features/Benefits

- Maximizes creative output through a clean and intuitive User Interface.
- Optimize efficiency through easy integration with task orientated workflows for News, Sports and Entertainment.
- Future-proof your investment through regular updates and easy migration to upgraded hardware.

HiGH **IMPACT** **EFFICIENCY** **MAXIMUM CREATIVE OUTPUT** **OPTIMUM WORKFLOW**

HIGHLIGHTS

XPRESSION VERSION 9.0

The latest version of XPression brings a slew of feature enhancements and improvements, including animated previews in XPression Sequencer, Adobe Photoshop file import, and XPression Font Manager.

IMPROVED WORKFLOWS

XPression 9.0 allows for duplication of scene directors, which allows for faster work by replicating similar animations without having to replicate manually. Additionally, the new video preview frame selector allows template designers to select the frame of a video shader material that is shown in the template preview (thumbnail).

XPRESSION MAPS 3.0

With XPression Maps 3.0, you can create amazing and complex map animations or stills in the Graphics Department, as well as Map Templates to be used for MOS-driven “Self-Service” workflows in the newsroom.
