IP & SDP WORKFLOWS

A range of modules designed for Point of Use conversion and processing of audio and video signals, GearLite, NEWT and IGGY are system problem solvers.

## Features/Benefits

- Solve system connectivity challenges with a wide range of solutions with support for common video and audio standards such as AES, AES67, MADI, SDI, 12G SDI, ST2110 & 2022-6 IP Video and more.
- Easily install with a range of mounting options including wall, rack mount and VESA. Ships with universal locking power adaptor.
- Get quality signal processing with Ross Point of Use Modules developed to the same exacting standards as our openGear modular platform.

HIGHLIGHTS

## **IGGY**

Our live audio-over-IP to MADI converter offers the most broadly interoperable, flexible and robust AES67 & ST2110 implementation on the market today. Iggy natively bridges multiple audio networking solutions, such as Dante/SAP, RAVENNA, NMOS, Livewire+, JSON and DashBoard, ensuring a solid connection to the AES67/ST2110 device of your choosing.

## **NEWT**

SMPTE ST2110 to/from SDI, HDMI conversion and 4KUHD support. Flexible support for the new IP video standards.

## **DETOUR**

12G Distribution Amplifier with bypass relay. Great for 12G 4KUHD systems and redundancy applications.
