

# PIERO SPORTS GRAPHICS

Version 13.9  
Release Notes

## What's New

### New Opta Module Interface:

A new interface comes with new features. Click on events on the newly added timeline to navigate to them in Piero\*. Simply create clips for your selected events straight from the Opta Module. Avoid switching between interfaces, connect a second screen and use the Opta VTR controls and timeline to control the video in Piero. *\*requires video of full match*

### NEW EFFECT – Title Text:

Ever wished there was a text effect specifically for titles? Now you've got one. Add your own PNG backgrounds to suit each context and use the two text boxes to position your text over the background. The effect spans the image left to right and can be placed anywhere vertically in the image.

### Laser Eye Tracking:

Link the origin and end points of a laser eye effect to different tracks to show how one player observes another. Alternatively, link the point of origin to a track and place the end point in a fixed position you want to show the player is watching as they move.

## Improvements

File Mode	Now using the latest Mainconcept codecs, improving stability and performance.
Region Tool	(i) Help information updated.
Spline Camera	Create, save and load your own presets.
Team Line Up	Adjust the handle size to make it easier to move players in Touch mode. Automatically time the One by One and Grouped animations with a timer.

## Bug Fixes

File Mode	Graphics now render in the correct place when exporting, preroll frames are ignored.
General	General stability improvements.
Opta	2018 World Cup now selectable.
Sportscodes XML Importer	Connects and injects clips into Piero.
Team Line Up	Select any Team Line Up effect on the timeline in Touch mode.
