

CB9 Inserts for Carbonite Ultra

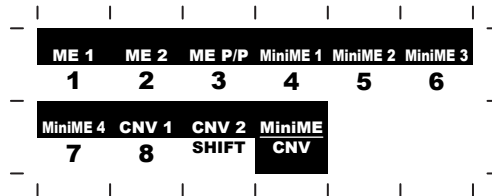

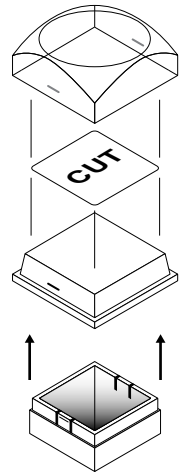

New Source Buttons

The CB9 control panel is configured for use with the CUF-124 frame by default. If you want to use your CB9 panel with a CUF-124 frame you must use the replacement inserts that are included with your control panel.

The new inserts identify the source buttons that are used to select an ME, MiniME, or Canvas when performing a memory recall/store, or assigning the panel row to an ME, MiniME, or Canvas.

If the replacement inserts have been missplaced, a replacement set is included below.

Print this page out on a clear lexan and cut out the inserts shown above. Ensure that you print the page at Actual Size to ensure the inserts are the proper size.
